

ENTERPRISE BUILDING DATA PLATFORM

Strategic Data Integration for Smarter Operations

Architect is a scalable, cloud-native data management and integration tool designed to unify Building Automation Systems (BAS) across your enterprise.

Built within the Niagara Framework, Architect centralizes fragmented data, enhances graphical interfaces, rapid code deployment, and operational efficiency.

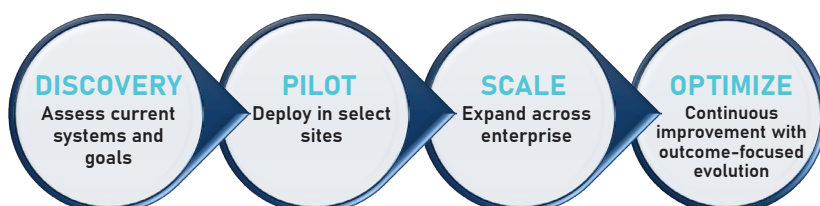

ARCHITECT Advantage

- Centralized data access across HVAC, lighting, and security systems
- Supports ESG goals and digital transformation
- Empowers owners with control of data standards

Business Impact + Value

- Reduce operational costs and integration overhead
- Standardize visualization and control across the enterprise
- Accelerate ROI through data-driven capital planning
- Deliver unified operator experiences in multi-vendor environments
- Consistent building control with universal standards

Implementation Roadmap

Let's Build Smarter Together

Architect empowers your team to unlock the full potential of building data. From universal standards to labor reduction, it's your gateway to smarter, more sustainable operations.
