# □ □ □ EC-BOS-8 IO Modules

### Overview

The EC-BOS-8 IO-R modules are part of the EC-Net portfolio of hardware, software and tools designed for remote monitoring and control applications that enables end-to-end automation and device-to-enterprise integration. The IO-R modules allow the EC-BOS-8 to interface directly with simple non-intelligent inputs and outputs remotely located up to 4,000 feet from the EC-BOS-8. The connection is established via an industry-standard RS 485 multi-drop communications bus. Multiple IO-R devices can be utilized on a single EC-BOS-8, providing 250+ IO points on a single EC-BOS-8.

## **Applications**

- Direct pin out replacement of NDIO IO-16 and IO-34 modules
- Remote monitoring of input devices
- Basic control applications
