

## About Schneider Electric

Schneider Electric is leading the Digital Transformation of Energy Management and Automation in Homes, Buildings, Data Centers, Infrastructure and Industries.
With global presence in over 100 countries, Schneider is the undisputable leader in Power Management - Medium Voltage, Low Voltage and Secure Power, and in Automation Systems. We provide integrated efficiency solutions, combining energy, automation and software. In our global Ecosystem, we collaborate with the largest Partner, Integrator and Developer Community on our Open Platform to deliver real-time control and operational efficiency.
We believe that great people and partners make Schneider a great company and that our commitment to Innovation, Diversity and Sustainability ensures that Life Is On everywhere, for everyone and at every moment.

## About This Catalog and Online Resources

## Welcome to the 2020 Schneider Electric Valves and Actuators Catalog

Superior engineering, product design patents, ISO9001 certification, and Six Sigma lean manufacturing ensure our products conform to the highest standards of internationally recognized quality to deliver solid performance, unsurpassed value and exceptional reliability. It is recommended to view this catalog in PDF (Acrobat Reader required) from the Exchange Extranet or from iPortal.

At various places throughout the printed catalog, you can take a picture with a Smartphone of the "Quick Response" (QR) code graphics to be taken to an online page describing a product featured. Users of this catalog are reminded to also view product Selection Guides, Specification and Installation Sheets, as well as the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.
In this catalog, click on ß to be directed to the SE website for the topic.

## The Exchange Extranet and iPortal

Schneider Electric's iPortal enables customers to quickly and easily search and order products, track order status, review order history and download product documentation. iPortal is an important on-line tool and part of our commitment to provide comprehensive information for both internal and sales channels. Explore the Exchange Extranet for quick and easy access to assets; from software and firmware to technical documentation, as well as sales and marketing collateral. Visit Schneider Electric at https://www.se.com/us/en/

## Online Selection Tool for Schneider Electric Valves/Assemblies \& Damper Actuators

Product Selection Tool

Schneider Electric's online selection tool for Valves/Assemblies and Damper Actuators quickly and easily puts a wealth of information at user fingertips to ensure specification of the optimum parts to fit their application.

## Features

- Part selection based on calculators and drop down menus
- Save and load customer profiles, including customer name, country, contact information, job titles, project names and customer logos
- Schedule hydronic systems using the Valve Assembly selection feature
- Schedule damper applications using the Damper Actuator selection feature
- View, edit, change and adjust schedules on the Schedule page. Download completed schedules to Excel, pdf, BOM for easy upload to iPortal, or formatted for upload to Schneider Electric's Studio 360 suite
- Save schedules in progress to be worked on later or for use as a template for future projects

## Browser Compatibility

- Chrome (recommended), Firefox, Safari, Edge, Internet Explorer 11 or greater

## Original Valve Selection Tool

- The online Valve Selection Tool launched in 2017 has all the features of the previous Valve Selection Tool plus added features; the previous Tool and all earlier versions will not be updated

Selection Tool Product Categories

- Ball Valves
- Butterfly Valves
- Damper Actuators
- Globe Valves
- Pressure Independent Balancing Control Valves
- Zone Valves

Key Functions \& Benefits

- Web-based Selection Tool (compatible with wide screen mobile devices)
- Schedule generation
- Sizing and Cv calculator
- List pricing on all products
- Schedule customization
- Quick access to related product documentation
- Favorite Products List Save Feature
- Schedule download to Excel, PDF, BOM
- Easy iPortal upload, Studio 360 File
- User Preferences and Customization
- Company Information
- Address \& Logo
- Favorite Parts List

## About This Catalog and Online Resources

## MyExchange Sales Mobile App

Bring more "wow" to your customer meetings! MyExchange mobile app enables sales teams to share the latest marketing and sales content via their mobile device to make meetings and follow-up more productive.

With the MyExchange app you can:

- Easily access and view the latest assets (e.g. videos, presentations, specification sheets) while online
- Download assets for availability while offline
- Electronically mark up assets (highlight, pen) and save changes
- Manage a personal "channel" with your own presentation content
- Email assets to others (customers, consultants) and manage sharing activities/history
- Receive news and notifications on updates directly on your device
- To download MyExchange for iOS devices, visit the iTunes® App Store (search for "myexchange Schneider Electric") or link to (in the U.S.):
- MyExchange Schneider Electric on the App Store on iTunes.
- For Android devices, access the app in the Google Play store by searching for 'myexchange Schneider Electric'. See the Play Store for Android system requirements.
You must self-register on The Exchange before using MyExchange. Register at:
https://ecobuilding.schneider-electric.com/login-register

## Valve and Valve Assembly Ordering Charts

Use this list to navigate directly to the Part Numbering Selection Charts and Selection Process (where available) in this catalog:

How smart infrastructures work

## 1. Damper Actuators

## Spring Return Direct Coupled SmartX Actuators

## Value-Driven General Purpose Applications

Mx4D-703x and Mx4D-803x Series

- Two position models controlled by SPST controller
- Floating models controlled by SPDT floating controllers
- Jumper selectable control function direct/reverse action
- Floating and Proportional models automatically adjust input span to match the damper/valve travel

Damp and Harsh Environment Applications

Mx40-717x Series

- Direct mount to round or square damper shaft
- $150 \mathrm{lb}-\mathrm{in}(17 \mathrm{~N}-\mathrm{m})$ torque rating, overload protection throughout rotation
- Oil immersed gear train provides continuous lubrication
- Automatic current sensing motor control provides extended reliability and repeatable timing
- Provides true mechanical clockwise or counterclockwise spring return operation for reliable positive close-off in airtight applications
- 5-year warranty, NEMA 4 housing (IEC IP56)
- Can be double mounted (gang mounting) to accommodate high torque application requirements (2 to 4 actuators)
- MS40-717x models provide position feedback signal

High Performance HVAC Applications

Mx40-704x Series

- Direct mount to round or square damper shaft
- 35 lb -in $(4 \mathrm{~N}-\mathrm{m})$ torque rating
- Overload protection throughout rotation
- Optional built-in auxiliary switches
- True mechanical clockwise or counterclockwise spring return operation for reliable, positive closeoff in airtight applications
- Visual position indicator
- Direct acting or reverse acting control mode available on proportional models
- Rotation limiting available
- Rugged die-cast housing for NEMA 2/IP54 rating

Mx41-7xxx Series

- Direct mount to round or square damper shaft
- $60 \mathrm{lb}-\mathrm{in}(7 \mathrm{~N}-\mathrm{m})$ torque rating
- $133 \mathrm{lb}-\mathrm{in}(15 \mathrm{~N}-\mathrm{m})$ torque rating
- Overload protection throughout rotation
- Optional built-in auxiliary switches
- Provides true mechanical clockwise or counterclockwise spring return operation for reliable positive close-off in airtight applications
- Direct acting or reverse acting control mode available on proportional models
- Rotation limiting available
- Rugged die-cast housing for NEMA 2/IP54 rating
- Manual override

High Torque HVAC Applications

Mx41-730x Series

- $270 \mathrm{lb}-\mathrm{in}(30 \mathrm{~N}-\mathrm{m})$ of torque with mechanical spring return, manual override, and Brushless DC Motor.
- Stall protected throughout rotation and reversible mounting.
- Models for Two Position $24 \mathrm{Vac} / \mathrm{Vdc}$, and Two Position 100... 230 Vac applications.
- Models for 2... 10 Vdc input signal applications (field configurable for other input signals) with a position feedback signal and direct/reverse acting control mode selection switch on both sides.
- Models for auxiliary switch applications.
- Models for NEMA 4 / IP66 outdoor applications.
- $95^{\circ}$ of rotation, adjustable with mechanical end stops and graduated position indicator showing $0^{\circ} \ldots 95^{\circ}$.
- Can be double-mounted (gang mounting) to accommodate high torque application requirements.

a - Proportional models with a $2 \ldots 10 \mathrm{VDC}$ control signal accept a $4 \ldots 20 \mathrm{~mA}$ signal with the use of a 500 ohm resistor.

- Class 2 power source.

3 - Also compatible with floating, pulse width modulating (PWM), and other DC signal inputs with use of the BEL-ZTH US Handheld Interface Module for Field Programming.
4 - Timing field adjustable from 60... 150 seconds with use of the BEL-ZTH US Handheld Interface Module for Field Programming.

## Mx4D-703x and Mx4D-803x Series

## $30 \mathrm{lb}-\mathrm{in}$ Direct Coupled Damper Actuators

## Product Description

Designed for controlling air dampers in building systems that require fail safe return, with two position, floating or proportional control.
Features

- Two position models controlled by SPST controller
- Floating models controlled by SPDT floating controllers
- Jumper selectable control function direct/reverse action
- Spring return models provide $30 \mathrm{in}-\mathrm{lb}(3.4 \mathrm{~N}-\mathrm{m})$ of torque
- Polymer housing rated for NEMA 2/IP54

- Overload protection throughout stroke
- Floating and proportional models automatically adjust input span to match the damper/valve travel
- Compact size allows installation in limited space
- Manual override allows positioning of dampers and valves
- Directly mounts to $1 / 2 \ldots 3^{\prime \prime}$ Schneider Electric ball valves
- Polymer housing rated for plenum use

| Specifications | Refer to the tables for actuator models and control types. |
| :--- | ---: |
| Control <br> Signal |  |
| Power Inputs | $3 \mathrm{ft}(91 \mathrm{~cm})$ appliance (see * in table below) <br> or $10 \mathrm{ft}.(3 \mathrm{~m})$ plenum cables, enclosure <br> accepts $1 / 2^{\prime \prime}(13 \mathrm{~mm})$ conduit connector. |
| Connections | Position Feedback Voltage (proportional or floating only): For <br> voltage ranges, the feedback signal is the same range as the <br> input signal. The $4 . .20 \mathrm{~mA}$ current range and floating actuators <br> have a $2 \ldots 10$ Vdc feedback signal. The feedback signal can <br> supply up to 0.5 mA to operate up to <br> four additional slave actuators. |
| Electrical <br> Outputs |  |

| Mechanical Outputs | Travel: $93^{\circ}$ nominal. <br> Manual Override: Allows positioning of damper or valve using manual crank. RA/DA Jumper: Permits reverse acting/direct acting control (MS4D models only). |
| :---: | :---: |
| Ambient Temperature Limits | Shipping \& Storage: $-40 \ldots 160^{\circ} \mathrm{F}\left(-40 \ldots 71^{\circ} \mathrm{C}\right)$. <br> Operating: -22... $140^{\circ} \mathrm{F}\left(-30 \ldots 60^{\circ} \mathrm{C}\right)$. <br> Humidity: $15 . . .95 \%$ RH, non-condensing. |
| Location | NEMA 1. NEMA 2, UL Type 2 (IEC IP54) with customer supplied water tight conduit connectors. Enclosure is air plenum rated. |
| Agency <br> Listings | UL 873: Underwriters Laboratories (File \#E9429 Category Temperature-Indicating and Regulating Equipment). CUL: UL LISTED for use in Canada by Underwriters Laboratories. Canadian Standards C22.2 No. 24-93. This product fits in Installation Category (Overvoltage Category) II per EN 61010-1. |

# Mx40-704x Series 35 Ib-in SR SmartX Damper Actuators 

## Mx40-704x Series <br> $35 \mathrm{Ib}-\mathrm{in}$ Direct Coupled Damper Actuators

## Product Description

For spring return applications requiring floating, two-position, or proportional modulation control of dampers and valves in HVAC systems. Directly mounts to $1 / 2^{\prime \prime} \ldots 3^{\prime \prime}$ Schneider Electric ball valves.
Features

- Direct mount to round or square damper shaft
- Overload protection throughout rotation
- Optional built-in auxiliary switches
- True mechanical clockwise or counterclockwise spring return operation for reliable, positive close-off in airtight applications
- Visual position indicator
- Direct acting or reverse acting control mode available on proportional models
- Rotation limiting available
- Rugged die-cast housing for NEMA 2/IP54 rating

| Specifications |  |
| :---: | :---: |
| Control Signal | On-off, SPST control contacts or Triacs ( 500 mA rated). Floating point control, 24 Vac . Proportional, 6...9, 2 .. 10 Vdc or 4 to 20 mA dc with a $500 \Omega$ resistor. |
| Power Inputs | See table. |
| Connections | MA40-704x and MA40-704x-501 - 3 ft . ( 91 cm ) long, appliance cables, $1 / 2 \mathrm{in}$. conduit connector. For M20 Metric conduit, use AM-756 adaptor. MF40-7043 and MF40-7043501, MS40-7043 and MS40-7043-501 - 3 ft . $(91 \mathrm{~cm}$ ) long, plenum-rated cables, $1 / 2 \mathrm{in}$. conduit connector. For M20 Metric conduit, use AM-756 adaptor. |
| Electrical Outputs | Position Feedback Voltage "AO": $2 \ldots 10 \mathrm{Vdc}$ (maximum 0.5 mA ) output signal for position feedback or operation of up to four slave actuators. One auxiliary switch available (select models). SPDT 6a resistive @24 Vac or 250 Vac. |

| Mechanical Outputs | Travel Rotation is limited to $95^{\circ} \pm 5^{\circ}$ maximum, adjustable from $40 . .95^{\circ}$ with a mechanical stop. RA/DA Switch: selects direct acting or reverse acting for proportional models. Position Indicator: Visual indicator, 0... 1 ( 0 is the spring-return position). |
| :---: | :---: |
| Ambient Temperature Limits | Shipping \& Storage: $-40 \mathrm{~F} \ldots 160^{\circ} \mathrm{F}\left(-40 \ldots 71^{\circ} \mathrm{C}\right)$. <br> Operating: $-22 \ldots 140^{\circ} \mathrm{F}\left(-30 \ldots 60^{\circ} \mathrm{C}\right)$. <br> Humidity: $5 \ldots 95 \%$ RH, non-condensing. |

## Mx40-717x Series

## $150 \mathrm{lb}-\mathrm{in}$ Direct Coupled Damper Actuators

Designed for controlling air dampers in building systems that require fail safe return, with two position, floating or proportional control.

Features

- Direct mount to round or square damper shaft
- Overload protection throughout rotation
- Oil immersed gear train provides continuous lubrication
- Automatic current sensing motor control provides extended reliability and repeatable timing
- Provides true mechanical clockwise or counterclockwise spring return operation for reliable positive close-off in airtight applications

## Mx41-730x Series

## 270 lb-in Direct Coupled Damper Actuators

Mx41-730x Series Spring Return SmartX Actuators are available with Two Position 24 Vac/Vdc, Two Position 100... 230 Vac, and $2 \ldots 10 \mathrm{Vdc}$ input signal applications. It is possible to field configure the $2 \ldots 10 \mathrm{Vdc}$ input signal models for other input signals such as floating and pulse width modulating (PWM).
Features

- Mechanical spring return, manual override, and Brushless DC Motor.
- Stall protected throughout rotation and reversible mounting.
- Models for auxiliary switch applications.
- Direct mount to $1 / 2^{\prime \prime} \ldots 3 / 4^{\prime \prime}$ round or $1 / 2^{\prime \prime} \ldots 11 / 16^{\prime \prime}$ square damper shafts or to $3 / 4^{\prime \prime} \ldots 1.05^{\prime \prime}$ round with the field removal of a clamp insert.
- $95^{\circ}$ of rotation, adjustable with mechanical end stops and graduated position indicator showing $0^{\circ} \ldots 95^{\circ}$.
- Can be double-mounted (gang mounting) to accommodate high torque application requirements.
- 5 Year warranty.

Direct coupled easy to install, and available with torque ranges from 44 to 300 lb -in for floating or proportional control.

## High Performance HVAC Applications

Mx41-60xx series

- $44 \mathrm{lb}-\mathrm{in}(5 \mathrm{~N}-\mathrm{m})$ and $88 \mathrm{lb}-\mathrm{in}(10 \mathrm{~N}-\mathrm{m})$ torque.
- Compact, lightweight design
- Easy-to-see position indicator
- Self-adapting capability for maximum flexibility in damper positioning.
- Quiet, low-power operation.
- Manual Override.

## Mx41-6153 series

- Synchronous motor technology with stall protection.
- Unique self-centering shaft coupling.
- Manual override.
- $133 \mathrm{lb}-\mathrm{in}(15 \mathrm{~N}-\mathrm{m})$ torque.
- $5^{\circ}$ preload as shipped from factory.

## Damp and Harsh Environment Applications

Mx41-63xx series

- $300 \mathrm{lb}-\mathrm{in}(34 \mathrm{~N}-\mathrm{m})$ torque
- NEMA Type 4 housing (IEC IP56).
- Custom automatic current sensing motor control provides extended reliability and repeatable timing.
- Direct coupled to the damper shaft with dual industrial hardened universal mounting clamps.
- Integral wiring for proportional control by 2... 10 Vdc or $4 . . .20 \mathrm{~mA}$ dc.

Clockwise or counterclockwise rotation is determined by actuator mounting position.

- Plenum cable standard
- Independently adjustable dual auxiliary switches option available (M×41-6083-502).
- Feedback position output signal available (MS41-6043/6083 series).
- c-UL-us LISTED and CE marked.
- Mechanical range adjustment capabilities.
- Independently adjustable dual auxiliary switches option available (MS41-6153-502)
- Built-in $1 / 2$ " conduit connection.
- c-UL-us LISTED and CE marked.

a - Proportional models with a $2 \ldots 10 \mathrm{VDC}$ control signal accept a $4 \ldots 20 \mathrm{~mA}$ signal with the use of a 500 ohm resistor.

## Mx41-60x3 Series $44 \mathrm{lb}-\mathrm{in}$ and 88 lb -in Direct Coupled Damper Actuators

These direct coupled 24 Vac Non-Spring Return rotary electric SmartX Actuators are designed for three position (floating) control of dampers.
Features

- Compact, lightweight design.
- Easy-to-see position indicator.
- Self-adapting capability for maximum flexibility in damper positioning.
- Quiet, low-power operation.

- Plenum cable standard.
- Independently adjustable dual auxiliary switches option available (M×41-6083-502).
- Feedback position output signal available (MS41-6043/6083 series).

| Mechanical Outputs | Travel: Normal angle of rotation is $90^{\circ}$, limited to a maximum of $95^{\circ}$. Field adjustable to limit travel on either end of stroke. |
| :---: | :---: |
| Ambient Temperature Limits | Shipping and storage: $-40 \ldots 158^{\circ} \mathrm{F}\left(-40 \ldots 70^{\circ} \mathrm{C}\right)$ Operating: $-25 \ldots 130^{\circ} \mathrm{F}\left(-32 \ldots 55^{\circ} \mathrm{C}\right)$ ambient. <br> NOTE: Check the valve operating temperature limit. The minimum valve temperature limit is $20^{\circ} \mathrm{F}\left(6.7^{\circ} \mathrm{C}\right) 5 \ldots 95 \% \mathrm{RH}$, non-condensing. |
| Location | NEMA Type 2 (IEC IP54) |
| Agency Listings | c-UL-us LISTED per UL 873 and CAN C22.2 No.24-93. CE compliant to directives LVD, EMC, and RoHS2. |

## M×41-6153 Series

## $133 \mathrm{lb}-\mathrm{in}$ Direct Coupled Damper Actuators

The direct-coupled, 24 Vac , non-spring return electronic SmartX actuator is designed for modulating and three-position control of building HVAC dampers requiring up to 133 lb -in ( $15 \mathrm{~N}-\mathrm{m}$ ) torque.

## Features

- Synchronous motor technology with stall protection
- Unique self-centering shaft coupling
- $5^{\circ}$ preload as shipped from factory
- Mechanical range adjustment capabilities
- Independently adjustable dual auxiliary switches option available (MS41-6053-502).
- Built-in $1 / 2^{\prime \prime}$ conduit connection

## Mx41-634x Series

## 300 lb -in Direct Coupled Damper Actuators

Direct Coupled SmartX Actuators are designed to be used in both damper and valve control applications. The MS41-634x series actuators are over the shaft non-spring return actuators compatible with $2 \ldots 10 \mathrm{Vdc}$ or $4 \ldots 20 \mathrm{~mA} \mathrm{dc}{ }^{1}$ control signals.

Features

- Custom automatic current sensing motor control provides extended reliability and repeatable timing
- Direct coupled to the damper shaft with dual industrial hardened universal mounting clamps
- Clockwise or counterclockwise rotation is determined by actuator mounting position
- Accurate $92^{\circ}$ travel digitally controlled
- Integral position indication scale
- Oil immersed gear train provides continuous lubrication
- Rated for operating temperatures up to $140^{\circ} \mathrm{F}\left(60^{\circ} \mathrm{C}\right)$
- Five year warranty

| AM-693-R ${ }^{\text {gh }}$ | Crank Arm Kit |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

a - AM-693 crank arm kit required.
b - Cannot be used with $M \times 41-634 \times$ or $M \times 40-717 \times$ series actuators
c - Drill appropriate mounting holes where needed.
$d$ - The large "C"-shaped clamps included in AM-693 crank arm kit are required for mounting the actuator. Drill appropriate mounting holes where needed.
e - For shafts to $1.05^{\prime \prime}$ diameter or $5 / 8^{\prime \prime}$ square
f - For shafts to $3 / 4^{\prime \prime}$ and $1.05^{\prime \prime}$ diameter (with AM-690 and AM-691, respectively).

- Use the self-tapping screws and flat washers provided in kit to mount actuator.
- AM-692 V-bolt kit required. The AM-693-R damper linkage kit is used in conjunction with the AM-687 or AM-688 universal clamps to provide a mechanical linkage between the damper actuator and the damper shaft when a direct coupling is not possible.
i- Used in conjunction with the AM-687 or AM-688 universal clamps for crankarm functionality in non-direct mounting applications.

## 1. Damper Actuators

## Product Description

The 0453L, light duty damper actuators are designed for a variety of two-position, spring return, damper applications. The 0453L uses a two-wire thermostat control.
The 0453 H , medium duty damper actuators are designed for a variety of two-position, Spring Return damper applications. The 0453H uses a two-wire thermostat control.
The 0453R, heavy duty damper actuators are designed for a variety of two-position, motor open and motor closed damper applications. The 0453R uses a three-wire thermostat control.

## Features

- Available with end switch
- Linkage or direct drive available
- Hysteresis synchronous motor with a "lost motion" drive to protect the gear train from closing shock

## 0453X Series Two-Position <br> Damper Actuators

Regulatory Compliance
(All are rated for use in Plenum spaces).
-Models 0453L, 0453H:
c-UR-us RECOGNIZED
Components, safety evaluated per UL 60730-1 \& -2-14, (including US FCC
Part-15 Class-B emissions) and safety evaluated per CSA/CAN E60730-1 \& -2-14, (including ICES-003 Class-B emissions). -Models 453L, 453H, 453R: CE Mark compliant, safety evaluated per EN 60730-1 \& -2-14, (including EN 61000-6-2 EU immunity \& EN 61000-6-3 EU emissions).

## 2-Way Brass Trim Valves with Soft Seats

## Brass Trim with Soft Seats

a - To minimize noise, ensure the flow rate in the piping is less than $10 \mathrm{ft}(3 \mathrm{~m}) /$ second and the differential pressure is less than $35 \mathrm{psi}(241 \mathrm{kPa})$. Operating with differential pressures above 35 psi may result in additional noise but is acceptable up to $87 \mathrm{psi}(600 \mathrm{kPa})$. Operating within the cavitation zone may result in noise and internal valve damage.
b - Maximum recommended differential pressure in open position. Do not exceed recommended differential pressure (pressure drop), as integrity of parts may be affected.
c - Refer to Seat Leakage Classes table.

## Stainless Steel Trim with Soft Seats

a - To minimize noise, ensure the flow rate in the piping is less than $10 \mathrm{ft}(3 \mathrm{~m}) /$ second and the differential pressure is less than $35 \mathrm{psi}(241 \mathrm{kPa})$. Operating with differential pressures above 35 psi may result in additional noise but is acceptable up to $87 \mathrm{psi}(600 \mathrm{kPa})$. Operating within the cavitation zone may result in noise and internal valve damage.
b-Maximum recommended differential pressure in open position. Do not exceed recommended differential pressure (pressure drop), as integrity of parts may be affected. Exceeding maximum recommended differential pressure voids product warranty.
c - Refer to Seat Leakage Classes table.

## 2. VB-7000 Sizing and Selection

## 2 \& 3-Way Valves Sizing for Water

## Sizing for Water

## Two-Position

Two-position control valves are normally selected "line Size" to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then 10\% of "available pressure" (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

## Proportional and Floating

Proportional and floating control valves are usually selected to take a pressure drop equal to at least $50 \%$ of the "available pressure." As "available pressure" is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of $5 \mathrm{psi}(34 \mathrm{kPa})$. When the design temperature drop is less than $60^{\circ} \mathrm{F}\left(33^{\circ} \mathrm{C}\right)$ for conventional heating systems, higher pressure drops across the valve are needed for good results.

### 2.1 Conventional Heating System

| Design Temperature <br> Load Drop ${ }^{\circ} \mathrm{F}\left({ }^{\circ} \mathrm{C}\right.$ ) | Recommended <br> Pressure Drop <br> (\% of Available Pressure) | Multiplier on <br> Load Drop |
| :---: | :---: | :---: |
| $60(33)$ or more | $50 \%$ | $1 \times$ Load Drop |
| $40(22)$ | $66 \%$ | $2 \times$ Load Drop |
| $20(11)$ | $75 \%$ | $3 \times$ Load Drop |

## Reducer Affects

On full flow bodies, offset the affects of directly connected reducer(s) by choosing flow coefficients $6 \%$ or more higher.

## Cv (Flow Coefficient) Determination

The valves' water capacity is based on the following formula:

$$
C v=\frac{G P M}{\sqrt{\Delta P}} \text { or } C V=G P M \quad \sqrt{\frac{\text { Specific Gravity }}{\Delta P}}
$$

Where:
$\mathrm{Cv}=$ Coefficient of flow
$C v$ is defined as the flow in GPM with $\Delta P=1$ psi with the valve completely open
GPM $=$ U.S. gallons per minute $\left(60^{\circ} \mathrm{F}, 15.6^{\circ} \mathrm{C}\right)$
$\Delta \mathrm{P}=$ Differential pressure in psi (pressure drop)

## Proportional 3-Way Valves

Recommended Pressure Drop - Bypass Application: 50\% of "available pressure," or equal to pressure drop through the load at full flow.
3-Way valves in the return used to control output by throttling water flow to the load (bypass applications) are controlling output in the same manner as throttling 2-Way valves, and must be selected using the same high pressure drops if good control results are to be obtained.
Recommended Pressure Drop - Constant Flow Applications:
$20 \%$ of "available pressure," or equal to $1 / 4$ of the pressure drop through the load at full flow.
3-Way valves used with individual pumps to control output by varying water temperature to the load (constant flow applications) are controlling output by mixing two water sources at different temperatures and do not require high pressure drops for good control results.

## Water Capacity Graph Instructions

To select the appropriate valve Cv from the Graph:

1. Select the required flow from the "Flow in GPM" axis.
2. Select available pressure drop from the "Pressure Drop in psi" axis.
3. Select the appropriate line and follow to the Capacity Cv (Kv) listing and choose the closest valve Cv flow coefficient.
4. Confirm the selection by calculation from the water equations.

## 2-Way Flow, Temperature \& Materials

### 2.2 Flow Characteristics

2-Way valves with brass plugs have modified equal percentage flow curves and valves with stainless steel plugs have modified linear flow curves. With modified equal percentage flow curves, for equal increments of valve stem stroke, the change in flow rate with respect to valve stroke may be expressed as a constant percent of the flow rate at the time of the change. The change of flow rate with respect to valve stroke is relatively small when the valve plug is near the valve seat and relatively high when the valve plug is nearly wide open. With modified linear flow curves, the flow is directly proportional to the valve stem position.

### 2.3 Temperature Pressure Ratings

Consult the appropriate valve linkage installation instructions for the effect of valve body ambient temperatures on specific actuators. Ratings conform with published values and disclaimer.
VB-72xx-0-4-P (Cast Bronze Body)
Standards: Pressure to ANSI B16.15 Class 250 with 400 psig up to $150^{\circ} \mathrm{F}$ decreasing to 321 psig at $281^{\circ}$ F, ASTM B584

CAUTION: Pressure/temperature ratings are for the body only, not the piping. Consult ANSI 816.22 for ratings of solder joint fittings. The lowest piping component ratings are the high limit.

### 2.4 VB-7200 2-Way Globe Valves Material Specifications

Packing and Seal materials: Polytetrafluoroethylene (PTFE), ethylene propylene diene monomer (EPDM)

2. VB-7000 Sizing and Selection

## 3-Way Flow, Temperature \& Materials

### 2.7 Flow Characteristics

3-Way mixing valves are designed so that the flow from inlet ports, (A and $B)$, to the outlet port (AB) is modified linear.

3-Way Diverting valves are designed so that the flow from the inlet port (B) to the outlet ports ( $A$ and $A B$ ) is modified linear.
Sequencing valves have both ports ( A and $B$ ) closed off in the center of stroke and have modified linear flow for each port as it opens to supply it's coil.
Rangeability is greater than 100:1 for both the $A$ and $B$ ports.

3-Way Mixing and Diverting Valves

VB-7332 Sequencing Valve

### 2.8 Temperature Pressure Ratings

Consult the appropriate valve linkage Installation Instructions sheet for the effect of valve body ambient temperatures on specific actuators. Ratings conform with published values and disclaimer.

VB-73xx-0-x-P (Cast Bronze Body)
Standards: Pressure to ANSI B16.15 Class 250 with 400 psig up to $150^{\circ} \mathrm{F}$ decreasing to 321 psig at $281^{\circ} \mathrm{F}$, ASTM B584.
CAUTION: Pressure/temperature ratings are for the body only, not the piping. Consult ANSI 816.22 for ratings of solder joint fittings. The lowest piping component ratings are the high limit.

2.9 VB-7300 3-Way Globe Valves Material Specifications

| Material |  | VB-7313, VB-7314 | VB-7312, VB-7332, | VB-7363 |
| :---: | :---: | :---: | :---: | :---: |
| Body |  | Bronze ASTM, B584 |  |  |
| A Port Seat |  | Brass |  | 316 Stainless Steel |
| B Port Seat |  | Bronze ASTM, B584 |  |  |
| Stem |  | 316 Stainless Steel |  |  |
| Plug |  | Brass |  | 316 Stainless Steel |
| Packing |  | Spring-Loaded PTFE/EPDM |  |  |
| A Port Seal | $1 / 2$ " and $3 / 4$ " | PTFE | Metal to Metal | PTFE |
|  | 1"...2" | EPDM |  |  |
| B Port Seal | $1 / 2$ " and $3 / 4$ " | Metal to Metal |  | Metal to Metal 316 Stainless Stee |
|  | 1"...2" |  |  |  |

Packing and Seal materials: Polytetrafluoroethylene (PTFE), ethylene propylene diene monomer (EPDM)

## Cavitation Limitations on Valve Pressure Drop

A valve selected with too high a pressure drop can cause erosion of seals and/or wire drawing of the seat. In addition, can cause noise, damage to the valve trim (and possibly the body), and choke the flow. Do not exceed the maximum differential pressure (pressure drop) for the valve selected.
The following formula can be used on higher temperature water systems, where cavitation could be a problem, to estimate the maximum allowable pressure drop across the valve:

$$
P_{m}=0.5(P 1-P v)
$$

Where:
$\mathrm{P}_{\mathrm{m}}=$ Maximum allowable pressure drop (psi)
P1 = Absolute inlet pressure (psia)
$\mathrm{Pv}=$ Absolute vapor pressure (psia)
Note: Add 14.7 psi to gauge supply pressure to obtain absolute pressure value. For example, if a valve is controlling $200^{\circ} \mathrm{F}$ water at an inlet pressure of 18 psig , the maximum pressure drop allowable would be:

$$
\mathrm{Pm}=0.5[(18+14.7)-11.53]=10.6 \mathrm{psi}
$$

(Vapor pressure of $200^{\circ} \mathrm{F}$ water is 11.53 psia)
Systems where cavitation is shown to be a problem can sometimes be adjusted to provide higher downstream back pressures. Valves having harder seat materials should be furnished if velocities are excessive.
2.11 Vapor Pressure Of Water

| Temp. ( ${ }^{\circ} \mathrm{F}$ ) | Pressure (psia) | Temp. ( ${ }^{\circ} \mathrm{F}$ ) | Pressure (psia) | Temp. ( ${ }^{\circ} \mathrm{F}$ ) | Pressure (psia) | Temp. ( ${ }^{\circ}$ ) | Pressure (psia) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 40 | 0.12 | 90 | 0.70 | 140 | 2.89 | 190 | 9.34 |
| 50 | 0.18 | 100 | 0.95 | 150 | 3.72 | 200 | 11.53 |
| 60 | 0.26 | 110 | 1.28 | 160 | 4.74 | 210 | 14.12 |
| 70 | 0.36 | 120 | 1.69 | 170 | 5.99 | 220 | 17.19 |
| 80 | 0.51 | 130 | 2.22 | 180 | 7.51 | 230 | 20.78 |

2.12 Cavitation Limitations on Valve Pressure Drop

Maximum Allowable Differential Pressure ( $\Delta \mathrm{P}$ )for Water Valves.

Selection Instructions
Warning: Pressure reducers do not lower boiler temperatures significantly, resulting in superheated steam.
Select only steam valves which can withstand temperatures near the original boiler temperature.
Caution: Do not size a steam valve with a pressure drop greater than $42 \%$ of the absolute pressure.
Actuator must be rated to provide adequate close off pressure.
Two Position Control: Unless otherwise specified, select line-size, 2-Way valves, stem-up open or closed and are normally sized using a minimum of $10 \%$ of inlet pressure (psig).

| Body Size | Cv | Port Code |
| :---: | :---: | :---: |

| 6 " | 370 | 16 |

## Proportional

1. Go to rows which are nearest to minimum pounds/hour flow required.
2. Go to columns nearest to the assured supply pressure.
3. Note Cv values at the column/row intersection.
4. Select the listed valve Cv which provides adequate flow.
5. If reducers are used, expect flow to be reduced as much as $15 \%$.

## Reference

For further information, download CA-28 Control valve sizing, F-13755, from iPortal.
The following is the terminology and the equations for the table above:

| "Low Pressure" steam <br> (Up to 15 psig.) | "High Pressure" steam <br> (Above 15 psig.) |
| :--- | :---: |
| $\mathrm{Cv}=\mathrm{Q} /\left(2.1 \times\left(\Delta \mathrm{P} \times(\mathrm{P} 1+\mathrm{P} 2)^{\wedge 0.5}\right.\right.$ | $\mathrm{Cv}=\mathrm{Q} /(1.38 \times \mathrm{P} 1 \mathrm{abs})$ |

## 2. VB-7000 Sizing and Selection

# VB-7000 \& VBS 9263 ½"...2" Hydraulic \& Electric Close-Off 

Note: The following tables offer a quick guide to valve actuator combination / close-off ratings.

### 2.14 Seat Leakage Classes

| ANSI/FCI 70-2 <br> Leakage Class <br> Class II | Maximum Seat Leakage |
| :---: | :---: |
| Class III | $0.5 \%$ of rated CV |

## Close-off Ratings

Nominal actuator close-off ratings range from ANSI III (metal to metal trim) to ANSI IV and ANSI V (EPDM and PTFE Discs). Refer to VB-7000 Bronze Bodies for your specific application requirements.
Note: Valve body and actuator size determine the close-off capabilities. Example: All $1 / 2^{\prime \prime}, 2$-Way globe valves will make the same close-off, regardless of the Cv rating, for a given actuator.

### 2.15 Electric Spring Return (SR)

## VB-7000 \& VBS-9263 Hydraulic \& Electric Close-Off (psi) <br> Stem Up Open, Closed \& Mixing

All are 250 psi. close-off. VB-7323 Diverting: Bottom port is the common.

## 3. VB-7000 Series Globe Valve and Actuator Assemblies

## 3. VB-7000 Series Globe Valve and Actuator Assemblies

Mx4x-6xxx and Mx4x-7000 Series Spring and Non-Spring Return Actuator/Linkage Assemblies with SmartX actuators.

2-Way Linked Globe Valve Assembly (Non-Spring Return Model shown)

## Globe Valve Assemblies

The VA, VF, and VS-7000 series Linked Globe Valve Assemblies are complete actuator/valve assemblies that accept two-position, floating or proportional control, respectively, from a DDC system or from a thermostat, for control of hot water, chilled water and steam coils. These valve assemblies consist of linked spring return and non-spring return actuators mounted on $1 / 2^{\prime \prime} \ldots 2$ " (15 mm... 50 mm ) 2-Way and 3-Way globe valve bodies, using a specially designed linkage assembly. 3-Way assemblies are available for mixing ( $1 / 22^{\prime \prime} \ldots 2^{\prime \prime}$ ) and Diverting ( $1 / 22^{\prime \prime} \ldots 2^{\prime \prime}$ ) applications.
Typical applications include reheat on VAV boxes, fan coil units, hot and chilled water coils in air handling units, unit ventilators, and central system applications.
Kits are available separately to allow field assembly of SmartX actuators to valve bodies.

| Class V | 0.0005 ml per minute per inch of orifice <br> diameter per psi differential |

## 3. VB-7000 Series Globe Valve and Actuator Assemblies

## Globe Valve Assembly Selection Procedure

When selecting a globe valve assembly, first determine the applicable codes for the control signal type, valve body configuration, end connection, port size and actuator according to Assembly Ordering on the next pages. Select a globe valve assembly part number as follows:

## 1. Control Signal Type, Valve Body Configuration and End Connection

Refer to Assembly Ordering and select the appropriate codes for the part-number fields.

## 2. Valve Size (Flow Coefficient)

If the required flow coefficient (Cv) has not been determined, do so as follows:
a. Refer to Sizing and Selection to calculate the required Cv .
b. Select the nearest available Cv value and corresponding valve body port code from Assembly Ordering.

## Globe Valve Assembly Selection Procedure

## 3. Actuator \& Linkages

Select the appropriate actuator and code, according to Assembly Ordering on the next pages based on the control signal type, required valve normal position, and voltage requirements. For detailed actuator information, refer to Pg. 65, 4. VB-7000 Series Globe Valve Actuators and Linkages for applicable actuator specifications.

Note: Linkages shown in Specification tables are supplied with the actuator. When shown in Optional Accessories the linkage must be ordered separately.

## 4. Close-off Pressure

Confirm, with respect to Actuator Close-Off Capacity, that the selected actuator and valve body combination provides sufficient close-off pressure. If no close-off pressure is shown, the valve body/actuator combination is not valid.

## 5. Available Space

If available space is a consideration, check the appropriate figure in the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.

|  | Description | Family | Electric Non-Spring Return Operation |  |  |  | Electric Spring Return Operation |  |  | Pneumatic Spring Return Operation |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## 3. VB-7000 Series Globe Valve and Actuator Assemblies

Choose a valve assembly having a close-off pressure capability sufficient for the application. Not all valve body and actuator combinations are available factory-assembled. Some combinations must be field-assembled.

## 2-Way Linked Globe Valve Assemblies with Linear Series Spring Return Actuators

b - To determine a specific part number, see Pg. 50, Ordering VB-7000 Globe Valve Assemblies for the relevant part series.

d - Close-off ANSI IV (.01\%) for soft seats.
e-Close-off pressure ratings describe only the differential pressure which the actuator can close-off with adequate seating force. Consult valve body specifications
for other limitations. The rating value is the pressure difference between the inlet and outlet ports.
f - Normally open (N.O.) assembly using stem up open valve body.
g - Normally closed (N.C.) assembly using stem up closed valve body.
h - Metric thread 15 to $80 \mathrm{~mm}(\mathrm{Rp} \mathrm{1/2}$ to Rp 3).
j - Valve body and actuator size determine the close-off capabilities. Example: All $1 / 2^{\prime \prime}, 2$-Way globe valves will make the same close-off regardless of the $C v$ rating for a given actuator.

## ½"...2" 2-Way Globe Valves with Linked SR Actuators

[^5]
## 3. VB-7000 Series Globe Valve and Actuator Assemblies

½"...2" 3-Way Globe Valves with Linear SR Actuators

Choose a valve assembly having a close-off pressure capability sufficient for the application. Not all valve body and actuator combinations are available factory-assembled. Some combinations must be field-assembled.

b-Models without actuator codes are not offered as factory assemblies. Purchase the actuator and the valve body separately and field assemble. For available factory assemblies, consult the price schedule.
c - To determine a specific part number, see Pg. 50, Ordering VB-7000 Globe Valve Assemblies for the relevant part series.
$\mathrm{d}-\mathrm{Cv}=\mathrm{gpm} / \sqrt{ } \Delta \mathrm{P}$ (where $\Delta \mathrm{P}$ is measured in psi.) $\quad$ kvs $=\mathrm{Cv} / 1.156$
e - Close-off pressure ratings describe only the differential pressure which the actuator can close-off with adequate seating force. Consult valve body specifications for other limitations. The rating value is the pressure difference between the inlet and outlet ports.

# 3. VB-7000 Series Globe Valve and Actuator Assemblies 

½"...2" 3-Way Globe Valves with Linked SR Actuators

Choose a valve assembly having a close-off pressure capability sufficient for the application. Not all valve body and actuator combinations are available factory-assembled. Some combinations must be field-assembled.

[^6]
## 3. VB-7000 Series Globe Valve and Actuator Assemblies

Choose a valve assembly having a close-off pressure capability sufficient for the application. Not all valve body and actuator combinations are available factory-assembled. Some combinations must be field-assembled.

a - To determine a specific part number, see Pg. 50, Ordering VB-7000 Globe Valve Assemblies for the relevant part series.
$\mathrm{b}-\mathrm{kvs}=\mathrm{m}^{3} / \mathrm{h}(\Delta \mathrm{P}=100 \mathrm{kPa}) \quad \mathrm{kvs}=\mathrm{Cv} / 1.156 \quad \mathrm{Cv}=\mathrm{kvs} \times 1.156$
c - All Vx-72xx leakage ratings are ANSI V to 35 psi and ANSI IV above 35 psi; with the exception of $V x-7273$ and $V x-7283$ (ANSI III).
d-Close-off pressure ratings describe only the differential pressure which the actuator can close-off with adequate seating force. Consult valve body specifications for other limitations. The rating value is the pressure difference between the inlet and outlet ports.
f - Shown for field assembly.

# 3. VB-7000 Series Globe Valve and Actuator Assemblies 

## ½"...2" 3-Way Globe Valves with Linked NSR Actuators

Choose a valve assembly having a close-off pressure capability sufficient for the application. Not all valve body and actuator combinations are available factory-assembled. Some combinations must be field-assembled.

3-Way Linked Globe Valve Assemblies with Non-Spring Return Actuators

a - To determine a specific part number, see Pg. 50, Ordering VB-7000 Globe Valve Assemblies for the relevant part series.
b - kvs $=\mathrm{m}^{3} / \mathrm{h}(\Delta \mathrm{P}=100 \mathrm{kPa}) \quad \mathrm{kvs}=\mathrm{Cv} / 1.156 \quad \mathrm{Cv}=\mathrm{kvs} \times 1.156$
c - Mixing Valves A port seat leakage ANSI IV, B port seat leakage ANSI III, Diverting Valves seat leakage is ANSI III.
e - Dual actuators are not available as factory assemblies.
Some factory assembly may be available but components may be ordered separately for field assembly.
f - Shown for field assembly.

a - MP-541X, MPR-5XXX use AV-7600-1 or AV-600 and AV-601.
b - Factory shipments have unpainted large springs. For $0 \ldots 10$ volt and $4 \ldots 20 \mathrm{~mA}$ controllers, use blue and booster springs.
$c$ - Close-off ratings for mixing or sequencing valves: ( $S U=$ " $A$ " port, $S D=$ " $B$ " port). " $A$ " port (SU) ratings equal pressure at port " $A$ " minus pressure at port " $B$ "; " $B$ "
port (SD) ratings equal pressure at port " B " minus pressure at port "A".
d-Close-off pressure ratings describe only the differential pressure which the actuator can close-off to standards with adequate seating force. Consult valve body specifications for other limitations.
e - Diverting valves may be used in mixing applications with minor affects on flow.
f - SU- Stem Up; SD- Stem Down.

## 3. VB-7000 Series Globe Valve and Actuator Assemblies

## ½"...2" 2-Way and 5/8" 3-Way Globe Valves with Pneumatic <br> Actuators

Select Actuator Type or Actuator Code (xxx) series with correct Input Signal having sufficient close-off for the application. If selecting component parts, select Valve Body and Positive Positioner if required.

*Not all actuator codes are factory assembled. If the assembly is no longer available but a close-off is shown on the tables above you may order the components that make up the assembly for field assembly. Note: Only bronze bodies listed. VBS-9263-0-4-P stainless steel bodies to -06 size are available with the same close off performance.

# Eco 5 truxure Innovation At Every Level 

# 4. VB-7000 Series Globe Valve Actuators and Linkages 

## Smart starts at the foundation of the BMS

Control devices deliver critical data on system conditions to the BMS and react to needed adjustments to ensure optimal performance.

Our sensors, valves and actuators are the foundation of a comprehensive, integrated BMS. Input/output devices interpret critical data points, sending real-time responses to changes in the physical environment. Measurement of control at the Field Device level is critical for a BMS to perform at optimal efficiency.

## 4. VB-7000 Series Globe Valve Actuators and Linkages

## MG350V

MG350V globe valve actuators are non-spring return electro-mechanical actuators for the control of two-way and three-way globe valves for fan coils, unit ventilators, reheat, cooling units, perimeter heating, and other applications.

Proportional, Floating, and Pulse Width Modulated (PWM) models are available for direct mounting on $1 / 2^{\prime \prime} . . .2^{\prime \prime}$ VB- 7000 globe valves. The MG350V actuators are also compatible with older field installed $1 / 2^{\prime \prime} . .11 / 4^{\prime \prime}$ VB-9000 globe valves as well as other valves (with the addition of AV-800 Globe Valve Adapters).

## Benefits

- Tri-color LED status indication for motion indication, auto calibration, and alarm notification.
- Auto calibration provides precise control by scaling the input signal to match the exact travel of the valve stem.
- Proportional models with and without a position output signal with field selectable 2... 10 Vdc and $0 . . .10 \mathrm{Vdc}$ input signals and selectable input signal action (reverse or direct acting).
- Floating and two-position models available with and without a position output signal.
- Pulse width modulated (PWM) models with field-selectable $0.59 \ldots 2.93 \mathrm{sec}$ and $0.1 \ldots 25.5 \mathrm{sec}$ input signal ranges with a position output signal.
- Stall protected throughout stroke.

- Position feedback output signal models include field selectable $2 \ldots 10 \mathrm{Vdc}$ or $0 . .5 \mathrm{Vdc}$ output signal.
- Removable wiring screw terminal with $1 / 2$ " conduit opening
- Integral linkage and self-adjusting valve position indicator
*The CE mark indicates RoHS2 compliance. Please refer to the CE Declaration of Conformity for additional details.

## 4. VB-7000 Globe Valve Actuators and Linkages

Forta M400A (VB) / M800A (VB) / M1500A (VB)
Forta M400A (VB) / M800A (VB) /M1500A (VB) series Non-Spring Return linear actuators are available in U-Bolt (M×00A) and Screw Mount (M×00A-VB) style for Schneider Electric globe valves with AV-821 linkage kits for mounting to VB-7000 valves. The Screw Mount style screws directly to the bonnet nut on VB-7000 valves (no adapter required). Applications include chilled or hot water and steam.

## Benefits

- Field-selectable input signals include reverse and direct-acting, Floating or Proportional plus proportional sequencing input signal ranges.
- Floating configuration - controlled by a SPDT floating controller
- Proportional configuration - 0...10, 2... 10 vdc or $4 . . .20 \mathrm{~mA}$ with the addition of a 500 ohm resistor (included)
- Direct/Reverse action switch selectable
- Linear force: $90 \mathrm{lbf}(400 \mathrm{~N}), 180 \mathrm{lbf}(800 \mathrm{~N}), 337 \mathrm{lbf}(1500 \mathrm{~N})$
- Die-cast housing with plenum-rated plastic cover for NEMA 2 (IP54 vertical mount only) applications
- Manual override to allow positioning of valve
- Electronic valve sequencing and electronic flow curve (equal percentage or Linear) selection.
- Torque overload protection throughout stroke
- Easy "One Touch" input signal/stroke calibration

a - Provides auxiliary power supply +20 Vdc 25 mA maximum.
Application
The AM-708 500 ohm resistor converts a $4 \ldots 20 \mathrm{~mA}$ signal to a $2 \ldots 10 \mathrm{Vdc}$ signal. Specifications

- Actuators: MS40-7043, MS41-7073, MS41-7153, MS40-717x, MS41-6083, MS41-6153 and MS41-6343.
- Wire leads.

Mx40-704x Spring Return Actuator Specifications

## Mx41-7073 Series SmartX Actuators 24 Vac $60 \mathrm{lb}-\mathrm{in}$

©

Spring Return Actuator

| Specifications |  |
| :---: | :---: |
| Torque | 60 lb -in ( $7 \mathrm{~N}-\mathrm{m}$ ) minimum |
| Connection | 3 ft . ( 0.9 m ) cable, $1 / 2^{\prime \prime}$ conduit connectors |
| Rotation | CW or CCW spring return using reverse mounting |
| Control Action | Direct/reverse signal selection (MS41- only) |
| Shaft Size | $3 / 44^{\prime \prime}(19 \mathrm{~mm})$ diameter, $1 / 2{ }^{\prime \prime}(13 \mathrm{~mm})$ square |
| Housing | NEMA 1, NEMA 2 (IEC IP54) with conduit connector in the down position |
| Dimensions | $1011 / 2 \times 4 \times 311 / 2^{\prime \prime}(287 \times 100 \times 89 \mathrm{~mm})$ |
| Overload Protection | Throughout rotation |
| Angle of Rotation | $93^{\circ}$ nominal |
| Position Indicator | Pointer and scale |
| Built-In Auxiliary Switch | 2-SPDT 7A on MA41-7073-502, MF41-7073-502, MS41-7073-502 only |
| Override | Manual |
| Motor Type | All brushless DC except MA41-7073-brush |
| Linkages | AV-602 |
| Installation Instructions | MA41-7073: F-26642, MF41-7073: F-26644, MS41-7073: F-26645 |
| Regulatory Compliance | c-UL-us LISTED for safety per UL 873 and CAN C22.2 No.24-93. CE mark compliant per EU directives LVD, EMC, and RoHS2. AUS/NZ marked RCM. |

|  | M $\times 41$-6083 | 1"...2" |  |
|  | M $\times 41$-6153 | 11⁄2"...2" |  |

a - Refer to linkage pages for complete details.

## 4. VB-7000 Globe Valve Actuators and Linkages

# MA-52xx Hydraulic 2-Position SR Actuators 

## Application

These MA-52xx Series actuators are used for two-position control of valves which require a return to the normal position upon power interruption.

Features

- Two-position actuators controlled by an SPST controller
- Spring return
- 24 Vac and 120 Vac models are available
- An actuator with the part number suffix "- 500 " has a built-in, adjustable, SPDT auxiliary switch
- Die cast lower housing with $1 / 2^{\prime \prime}$ conduit opening and painted steel upper housing
- Hydraulic actuator with oil-immersed motor and pump

MA-52xx Spring Return Series

| Model Table |  |  |  |  |  |  |  |  |

| 80 (26) | 140 (60) ${ }^{\text {a }}$ | 140 (60) ${ }^{\text {a }}$ |

a - Maximum ambient temperature of the actuator must never exceed $140^{\circ} \mathrm{F}\left(60^{\circ} \mathrm{C}\right)$.

| Optional Accessories |  |
| :--- | :---: |
| Linkages |  |
| AV-601 | Linkage extension for hot water and steam applications; use with AV-7600. |
| AV-7600-1 | Linkage $1 / 2^{\prime \prime} \ldots 2^{\prime \prime}$ to be used with VB-7000. |

Typical Wiring for MA-5xxx Series Actuators

## Application

The AV-7600-1 Linkage kit is used to field assemble MA-521x,
MP-521x, MP-541x and MP-561x round hydraulic actuators to $1 / 2$ "
through 2" VB-7000 series valve bodies.

## Features

- Provides direct-couple interface between MA, MP and MPR-5xxx actuators and valve bodies.
- Kit fits all VB-7000 series valve bodies.
- Includes spring choices for higher 2-Way valve close off. Specifications
- Actuator mounting: In any upright position above the center line of the valve body. For steam applications only, mount the actuator above the valve body at $45^{\circ}$ from vertical.

## Application

These MP-52xx Series actuators provide electronic proportional control of valves requiring the return to normal position upon power interruption.

Features

- Compatibility with 2... 15 Vdc System 8000 input signals.
- Proportional control by variable Vdc input signal.
- Spring return
- Fixed 3 Vdc operating span.
- Non-adjustable start point and non-positive positioning. Typically, one actuator is controlled from one Vdc output signal.
- $10,000 \Omega$ or greater input impedance.

MP-52xx Proportional

- Die cast lower housing with $1 / 2$ " $(12.7 \mathrm{~mm})$ conduit opening and painted steel upper housing.
- Hydraulic actuator with oil-immersed motor, transducer, and pump.

c - Maximum allowable ambient temperature of the actuator.
Optional Accessories

| Linkages |  |
| :--- | :---: |
| AV-601 | Linkage extension for hot water and steam applications; use with AV-7600. |
| AV-7600-1 | Linkage for VB-7000. |

Application
The AV-7600-1 Linkage kit is used to field assemble MA-521x,
MP-521x, MP-541x and MP-561x round hydraulic actuators to $1 / 2$ "
through 2" VB-7000 series valve bodies.
Features

- Provides direct-couple interface between MA, MP and MPR-5xxx actuators and valve bodies.
- Kit fits all VB-7000 series valve bodies.
- Includes spring choices for higher 2-Way valve close off. Specifications
- Actuator mounting: In any upright position above the center line of the valve body. For steam applications only, mount the actuator above the valve body at $45^{\circ}$ from vertical.

AV-7600-1
Hydraulic Actuator Linkage Kit

## Application

These MP-54xx Series actuators provide electronic proportional control of valves requiring the return to normal position upon power interruption.

Features

- Proportional control by variable Vdc input signal.
- Compatibility with $2 \ldots 15 \mathrm{Vdc}$ System 8000 input signals.
- Spring return.
- Fixed 3 Vdc operating span.
- Adjustable 2... 12 Vdc start point for paralleling or sequencing of actuators.
- $10,000 \Omega$ or greater input impedance.
- 24 and 120 Vac models.

MP-541x Series Positive Positioning

- Damper models with linkage or base models that require separate damper or Linkage.
- Die cast lower housing with $1 / 2$ " conduit opening and painted steel upper housing.
- Hydraulic actuator with oil immersed motor, transducer, and pump.

Wiring Diagram 4... 20 mAdc Controllers

## Application

The AM-708 500 ohm resistor converts a $4 \ldots 20 \mathrm{~mA}$ signal to a $2 \ldots 10 \mathrm{Vdc}$ signal.
AM-708
500 Ohm

- Wire leads.

## Application

The AV-7600-1 Linkage kit is used to field assemble MA-521x, MP-521x, MP-541x and MP-561x round hydraulic actuators to $1 / 2$ "

AV-7600-1
through 2" VB-7000 series valve bodies.

## Features

- Provides direct-couple interface between MA, MP and MPR-5xxx actuators and valve bodies
- Kit fits all VB-7000 series valve bodies.
- Includes spring choices for higher 2-Way valve close off.

## Specifications

- Actuator mounting: In any upright position above the center line of the valve body. For steam applications only, mount the actuator above the valve body at $45^{\circ}$ from vertical.

## 4. VB-7000 Globe Valve Actuators and Linkages

# AV-601 Extension for MA, MP 5x1x-xxx, MPR-5x1x, MP-541x 

## Application

The AV-601 linkage extension kit is used to increase the allowable ambient temperature range of MA, MP-5x1x-xxx, MPR-5x1x and MP-541x Series actuators. The MP-541x and MPR-5x1x Series of actuators require the AV-601 extension. This kit provides thermal insulation between the valve and the actuator. It does not insulate the actuator from radiant or convective heat transfer.

## Specifications

Kit consists of an extension coupling and a spacer.
Dimensions: Add 2-1/32" (52 mm) to the "E" dimension for the valve assembly using an AV-601 linkage extension. Refer to complete dimensions in the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.

AV-601 Linkage Extension for Electric/Electronic Hydraulic Valve Actuators

- 2-Way Valves, Union End
- 2-Way Valves, Threaded
- 3-Way Mixing and Sequencing Valves, Flared
- 3-Way Mixing and Diverting Valves, Threaded

## 4. VB-7000 Globe Valve Actuators and Linkages

## MK-2690 Pneumatic Valve Actuator - Proportional

## Application

MK-2690 Proportional
Pneumatic Valve Actuator

The MK-2690 provides proportional pneumatic control of ½"...2" VB-7000 Series valves (subject to close-off ratings) and discontinued $1 / 2^{\prime \prime} . .1^{1} 1 / 4^{\prime \prime}$ VB- $9 \times x x$ valves.

## Features

- Compact size with $6 \mathrm{in}^{2}\left(39 \mathrm{~cm}^{2}\right)$ effective area
- Rugged die cast aluminum housing
- Replaceable beaded, molded, neoprene diaphragm

| Model Table |  |  |

| Optional Accessories |  |
| :---: | :---: |
| Spring | Stainless steel spring retracts actuator shaft and raises valve stem on loss of air pressure. |
| Springs provided in AV-400 or AV-7400 linkage. |  |

## 4. VB-7000 Globe Valve Actuators and Linkages

## Application

The AV-7400 Linkage kit is used to field install MK-2690 pneumatic actuators to a variety of $1 / 2^{\prime \prime} \ldots 2^{\prime \prime}$ VB-7000 series valve bodies.

Features

- Springs are provided for control-signal applications, including 3...7, 5... 10 and 8... 12 psig.
- Kit fits all VB-7000 series valve bodies.
- Blue spring used with AV-7600-1 supports hydraulic $4 \ldots 20 \mathrm{~mA}$ and $0 . . .10 \mathrm{Vdc}$ applications.

Specifications

- Actuator mounting: In any upright position with actuator above the center line of the valve body.

## Spring Specifications

| Spring Specifications |  |
| :---: | :---: |
| Spring Range <br> psig (kPa) | Spring Color |
| $3 \ldots 7(21 \ldots 48)$ | Yellow |
| $5 \ldots 10(34 \ldots 68)$ | Black |
| $8 \ldots .13(55 \ldots 89)$ | Blue |

MK-46xx
Proportional Pneumatic Valve Actuator

## Application

The MK-46xx Series and MK-4621-422 proportional pneumatic actuators, with 11 sq. in. $\left(71 \mathrm{~cm}^{2}\right)$ effective diaphragm area, are used to control $1 / 22^{\prime \prime} . .2$ " VB-7000 series valves.

Features

- Rugged die cast aluminum construction.
- Rolling diaphragm.
- Multiple spring ranges for various applications.
- Adjustable start point (refer to Specifications).
- ½" nominal stroke.
- Can also be used on $1 / 2$ " stroke discontinued VB-9xxx series valves ( $1 / 22^{\prime \prime} . .11 / 4$ ").

| Model Table |  |  |
| :--- | :---: | :---: |
| Model Number | Nominal Spring Range ${ }^{\text {a }}$ |  |

AK-42309-500
Positive Positioning Relay

Figure 1 Pliping Connections.

MORE INFO
Scan the QR code or visit the link below for more information.

Visit:
http://goo.gl/LJCLEb

## Application

Positive positioner pneumatic relay is used to accurately position an actuator stroke with respect to signal pressure from the controller. It can also be used to change the effective spring range of an actuator and increase the capacity of a controller.

## Features

For accurate positioning of valve and damper actuators, this positioner utilizes a pilot-operated, relay-type position-sensing mechanism, much more sensitive to actuator position changes than some competitive"force-balance" positioners.

## Model Number

## Description

AK-42309-500
Positive Positioning Relay with Mounting Linkage.
Note: This model cannot be used with M556, M572, M573, M574 Series actuators. Use N800-0555 positioner with M556, M573, and M574.

| Specifications |  |
| :---: | :---: |
| Action | Direct (increase in output pressure to actuator with an increase in pilot pressure from controller). |
| Pilot input | $0 \ldots$ main air pressure, psig. |
| Output | $0 . .$. main air pressure, psig. |
| Construction |  |
| Housing | Polysulfone |
| Diaphragm | Neoprene |
| Start point | Adjustable 1... 12 psig ( $7 \ldots 83 \mathrm{kPa}$ ). |
| Span | Adjustable 2... 13 psi ( $14 \ldots . .90 \mathrm{kPa}$ ); factory set at 5 psig . |
| Stroke | Adjustable $2 \ldots 13 \mathrm{psi}(14 \ldots 90 \mathrm{kPa})$; factory set at 5 psig with feedback spring for $7 / 16 \ldots 5$ " stroke. |
| Supply air pressure | Clean, oil free, dry air required (refer to EN-123). |
| Maximum | $30 \mathrm{psig}(207 \mathrm{kPa})$. |
| Nominal supply | 15... 20 psig (103... 138 kPa ) |
| Environment |  |
| Ambient temperature limits | Shipping: $-40 \ldots 160^{\circ} \mathrm{F}\left(-40 \ldots 71^{\circ} \mathrm{C}\right)$. Operating: $32 \ldots 140^{\circ} \mathrm{F}\left(0 \ldots 60^{\circ} \mathrm{C}\right)$. |
| Humidity | 5...95\% R.H., non-condensing. |
| Locations | NEMA Type 1 (IP10). |
| Air connection code | Refer to Figure 1 |
| Air connections |  |
| "M" and "B" | Barbed for 1/4" O.D. plastic tubing. |
| "P" | Dual-contoured for 1/4" O.D. and 5/32" O.D. tubing. |
| Air consumption for sizing air compressor | $19 \mathrm{scim}(5.2 \mathrm{~mL} / \mathrm{s})$ at 20 psig ( 138 kPa ) supply. |
| Air capacity for sizing air mains | $20 \operatorname{scim}(5.5 \mathrm{~mL} / \mathrm{s})$. |
| Flow capacity | $860 \mathrm{scim}(235 \mathrm{~mL} / \mathrm{s})$ at 20 psig ( 138 kPa ) supply. |
| Mounting linkage | All necessary linkage provided to assemble AK-42309-500 to MK-2690 actuator and the following actuator series; MK-3000, MK-4400, MK-4600, MK-4700, MK-4800, MK-6600, MK-6800, MK6900, MK-7100, MK-8800 and MK-8900. |
| Dimensions | $21 / 2 \mathrm{H} \times 41 / 2 \mathrm{~W} \times 3 \mathrm{D}$ " (64 x $114 \times 76 \mathrm{~mm})$. |
| Regulatory Compliance | RoHS and REACh |

h - All Diverting flow configurations, flow $A B$ to either $A$ or $B$ ports.
i- Glycol up to 50\%

VB-8000 3-Way Flow Patterns

## Application

VB-9313 series 3-Way mixing valves control hot or chilled water in heating or air conditioning systems. These valves must be piped with two inlets ("A" and "B" ports) and one outlet ("AB" port). They are used for two-position or proportional control applications. Valve assemblies require an actuator and a Linkage that may be factory or field assembled.

## Features

- Valve sizes $21 / 2{ }^{\prime \prime} \ldots 6^{\prime \prime}$.
- 125 psig pressure rating per ANSI Standards (B16.1-1993) for flanged cast iron bodies.
- Spring-loaded TFE \& EPDM packing.

c - Glycol up to 50\%

VB-93xx 3-Way Mixing Flow Pattern

## 5. VB-8/9000 Series Globe Valves Sizing and Selection

## Sizing for Water

## Two-Position

Two-position control valves are normally selected "line Size" to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then $10 \%$ of "available pressure" (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

## Proportional and Floating

Proportional and floating control valves are usually selected to take a pressure drop equal to at least 50\% of the "available pressure." As "available pressure" is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of $5 \mathrm{psi}(34 \mathrm{kPa})$. When the design temperature drop is less than $60^{\circ} \mathrm{F}\left(33^{\circ} \mathrm{C}\right)$ for conventional heating systems, higher pressure drops across the valve are needed for good results.

## Conventional Heating System Pressure Drops

| Design Temperature <br> Load Drop ${ }^{\circ} \mathrm{F}\left({ }^{\circ} \mathrm{C}\right)$ | Recommended <br> Pressure Drop (\% of <br> Available Pressure) | Multiplier on Load Drop |
| :---: | :---: | :---: |
| $60(33)$ or more | $50 \%$ | $1 \times$ Load Drop |
| $40(22)$ | $66 \%$ | $2 \times$ Load Drop |
| $20(11)$ | $75 \%$ | $3 \times$ Load Drop |

## Reducer Affects

On full flow bodies, offset the affects of directly connected reducer(s) by choosing flow coefficients 6\% or more higher.

## Cv (Flow Coefficient) Determination

The valves' water capacity is based on the following formula:

$$
C v=\frac{G P M}{\sqrt{\Delta P}} \text { or } C v=G P M \sqrt{\frac{\text { Specific Gravity }}{\Delta P}}
$$

Where:
Cv = Coefficient of flow
Cv is defined as the flow in GPM with $\Delta \mathrm{P}=1 \mathrm{psi}$ with the valve completely open

GPM $=$ U.S. gallons per minute $\left(60^{\circ} \mathrm{F}, 15.6^{\circ} \mathrm{C}\right)$
$\Delta \mathrm{P}=$ Differential pressure in psi (pressure drop)

## Proportional 3-Way Valves

Recommended Pressure Drop

## Bypass Application

$50 \%$ of "available pressure," or equal to pressure drop through the load at full flow.
3-Way valves in the return used to control output by throttling water flow to the load (bypass applications) are controlling output in the same manner as throttling 2-Way valves, and must be selected using the same high pressure drops if good control results are to be obtained.

## Constant Flow Applications

$20 \%$ of "available pressure," or equal to $1 / 4$ of the pressure drop through the load at full flow.
3-Way valves used with individual pumps to control output by varying water temperature to the load (constant flow applications) are controlling output by mixing two water sources at different temperatures and do not require high pressure drops for good control results.

## Water Capacity Graph Instructions

To select the appropriate valve Cv from the Graph:

1. Select the required flow from the "Flow in GPM" axis.
2. Select available pressure drop from the "Pressure Drop in psi" axis.
3. Select the appropriate line and follow to the Capacity Cv (Kv) listing and choose the closest valve Cv flow coefficient.
4. Confirm the selection by calculation from the water equations.

## 5. VB-8/9000 Series Globe Valves Sizing and Selection

## System Design Considerations

Note: The information in this section describes characteristics of the VB-8xx3 valve bodies, which are used in the $V x-8 x x 3$ valve assemblies.

## Control Precision

## 2-Way Valves:

The flow curve shown below is representative of all sizes. All valve plugs have lower gain when nearly closed to enhance control at low demand. 2-Way valves are nominally equal percentage and normally used for water and low pressure steam.

Typical Modified Equal Percentage Flow Characteristics

## Temperature/Pressure Ratings

Temperature and pressure ratings of 2-Way and 3-Way valves are shown below. Ratings conform with published values and disclaimer.

169 psig
(1166 kPa)

## 3-Way Valves:

3-Way mixing valves are designed so that the flow from either of the inlet ports to the outlet is nominally linear, which means the total flow from the outlet is almost constant over the stroke of the valve stem. The flow is limited at the initial opening similar to an equal percentage curve to enhance system stability. Typical flow characteristics of the VB-8303 series valve bodies are shown below.

Typical Flow Characteristics

## Rangeability

Rangeability is the ratio of rated flow to the minimum controllable flow through a valve. The nominal rangeability of the VB-8xx3 Series is greater than 100:1.

## VB-8xx3-0-5-P (Cast Iron Body with Flanged End Fittings)

Standards: Pressure to ANSI B16.1, Class 125, with 200 psi (1379 $\mathrm{kPa})$ up to $150{ }^{\circ} \mathrm{F}\left(65^{\circ} \mathrm{C}\right)$, decreasing to $169 \mathrm{psi}(1165 \mathrm{kPa})$ at $281^{\circ} \mathrm{F}$ (138 ${ }^{\circ} \mathrm{C}$ ).

Materials: Valve body: Cast iron, ASTM A126 Class B.
Trim: Stainless steel stem, forged brass plug, metal-to-metal or EPDM seat ring with TFE/EPDM packing parts and silicone packing grease.

Close-off Ratings
Nominal actuator close-off ratings are based on ANSI IV (0.01\% leakage) for valves with EPDM seat rings such as VB-8213 and VB-8223. Metal-to-metal trim valves such as VB-8303 are designed for ANSI III (0.1\% leakage).

# VB-82x3 Water Flow Coefficient and Capacity 

## Water Flow Coefficient (Cv)

Sizing a valve requires selecting a flow coefficient (Cv), which is defined as the flow rate in gallons per minute (gpm) of $60^{\circ} \mathrm{F}$ water that will pass through the fully open valve with a 1 psi pressure drop ( $\Delta \mathrm{P}$ ). It is calculated according to the formulas shown in Cv Equation for Water and Cv Equation for Steam.
Since the flow rate through the heat exchanger is usually specified, the only variable normally available in sizing a valve is the pressure drop. The following information can be used to determine what pressure drop to use in calculating a valve Cv. Using the calculated Cv, consult the Water Capacity table on this page or the Steam Capacity to select the valve body with the nearest available Cv.
Caution: Be sure that the anticipated pressure drop across the valve will not exceed the close-off pressure rating and the maximum pressure differential rating listed in the $V x-8 x x x$ Selection Guide, F-27199.

## Two-position

Two-position control valves are normally selected "line Size" to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then $10 \%$ of "available pressure" (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

## Proportional

Proportional control valves are usually selected to take a pressure drop equal to at least $50 \%$ of the "available pressure." As "available pressure" is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of $5 \mathrm{psi}(34 \mathrm{kPa})$. When the design temperature drop is less than $60^{\circ} \mathrm{F}\left(33^{\circ} \mathrm{C}\right)$ for conventional heating systems, higher pressure drops across the valve are needed for good results (see the table Conventional Heating System below).

Conventional Heating System Pressure Drops

| Design Temperature <br> Load Drop ${ }^{\circ} \mathrm{F}\left({ }^{\circ} \mathrm{C}\right)$ | Recommended Pressure Drop <br> (\% of Available Pressure) | Multiplier on <br> Load Drop |
| :---: | :---: | :---: |
| $60(33)$ or More | $50 \%$ | $1 \times$ Load Drop |
| $40(22)$ | $66 \%$ | $2 \times$ Load Drop |
| $20(11)$ | $75 \%$ | $3 \times$ Load Drop |

Secondary Circuits with Small Booster Pumps: $50 \%$ of available pressure difference (equal to the drop through load, or $50 \%$ of booster pump head).

## Water Table

## Cv Equation for Water

Where:

$$
\mathrm{Cv}=\frac{\mathrm{GPM}}{\sqrt{\Delta \mathrm{P}}} \quad \Delta \mathrm{P}=\left(\frac{\mathrm{GPM}}{\mathrm{CV}}\right)^{2} \quad \mathrm{GPM}=\mathrm{CV} \sqrt{\Delta \mathrm{P}}
$$

Cv = Coefficient of flow.
gpm = Flow rate of water that will pass through fully open valve, measured in U.S. gallons per minute $\left(60^{\circ} \mathrm{F}\left(15.6^{\circ} \mathrm{C}\right)\right.$ water $)$.
DP = Differential pressure (pressure drop), measured in psi.

# VB-82x3 Steam Capacity \& <br> Vapor Pressures 

## Steam

## Two-Position

Two-position zone valves and direct radiation valves are normally sized using a minimum of $10 \%$ of inlet pressure (psig).
Proportional
Proportional control valves are normally sized using:

- For low pressure ( 15 psig or less), use $\Delta \mathrm{P}$ of $80 \%$ of gauge inlet pressure.
- For steam pressures greater than 15 psig, use $\Delta \mathrm{P}$ of $42 \%$ of absolute (gauge plus 14.7 ) inlet pressure.
- When the Cv required is between two valve sizes, select the larger size. Do not size steam valves using a pressure drop greater than $42 \%$ of the absolute inlet pressure.

## Steam Table

a - Left column shows \# per hour with a $10 \%$ pressure drop and right column shows \# per hour with an $80 \%$ pressure drop.
Cv Equation for Steam

$$
C v=\frac{Q \times K}{3 \sqrt{\Delta P \times P} 2} \quad Q=\frac{3 C v \sqrt{\Delta P \times P 2}}{K}
$$

Where:
$\mathrm{Cv}=$ Coefficient of flow.
Q = Flow rate of steam that will pass through fully open valve, measured as pounds per hour of steam.
$\Delta \mathrm{P}=$ Differential pressure (pressure drop), measured in psi.
P2 = Outlet pressure, measured in psia (absolute pressure). $\mathrm{P} 2=$ Inlet pressure $+14.7-\Delta \mathrm{P}$.
$K=1+\left(0.0007 \times{ }^{\circ} \mathrm{F}\right.$ superheat). $\mathrm{K}=1$ for saturated steam.

## Cavitation Limitations on Valve Pressure Drop

A valve selected with too high a pressure drop can cause erosion of discs and/or wire drawing of the seat. In addition, cavitation can cause noise, damage to the valve trim (and possibly the body), and choke the flow through the valve.
Do not exceed the maximum differential pressure (pressure drop) for the valve selected.
The following formula can be used on higher-temperature water systems, where cavitation could be a problem, to estimate the maximum allowable pressure drop across the valve:
$P m=0.5(P 1-P v)$
Where:
Pm = Maximum allowable pressure drop
P1 = Absolute inlet pressure (psia)
$\mathrm{P} V=$ Absolute vapor pressure (psia)
Note: Add 14.7 psi to the gauge supply pressure to obtain the absolute pressure value.
For example, if a valve is controlling $200^{\circ} \mathrm{F}$ water at an inlet pressure of 18 psig , the maximum pressure drop allowable would be:
$\mathrm{Pm}=0.5[(18+14.7)-11.53]=10.6 \mathrm{psi}\left(\right.$ Vapor pressure of $200^{\circ} \mathrm{F}$ water is 11.53 psi.$\left.\right)$
Therefore, if the pressure drop for this valve is less than 10.6 psi, cavitation should not be a problem.
Systems where cavitation is shown to be a problem can sometimes be redesigned to provide lower inlet velocities. Valves having harder seat materials should be furnished if inlet velocities cannot be lowered.
For additional valve sizing information, see the Vx-8xxx Selection Guide, F-27199.

## 5. VB-8/9000 Series Globe Valves Sizing and Selection

## VB-9313 Valve Body <br> Characteristics

## Flow Characteristics

3-Way mixing valves are designed so that the flow from either of the inlet ports to the outlet is approximately linear, which means the total flow from the outlet is almost constant over the stroke of the valve stem. Typical flow characteristics of
VB-9313 series valve bodies are shown below.

Typical Flow Characteristics

## Rangeability

Rangeability is the ratio of rated flow to the minimum controllable flow through a valve. For mixing valves, control begins as soon as plug displacement allows flow. Thus, 3-Way valve rangeability normally exceeds 500:1, which is the reciprocal of $0.2 \%$ nominal leakage.

## Temperature/Pressure Ratings

VB-9313-0-5-P (Flanged Cast Iron Body)
Standards: ANSI B16.1-1993
Materials: ASTM A126 Class B

Pressure - psig (kPa)
Temperature and Pressure Ratings for VB-9313 Series Valve Bodies

## Water

## Two-position

Two-position control valves are normally selected "line Size" to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then $10 \%$ of "available pressure" (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.
Proportional to Bypass Flow
Proportional mixing valves used to bypass flow are piped on the outlet side of the load to throttle the water flow through the load and therefore control heat output of the load. These valves are usually selected to take a pressure drop equal to at least $50 \%$ of the "available pressure." As "available pressure" is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of 5 psi ( 34 $\mathrm{kPa})$. When the design temperature drop is less than $60^{\circ} \mathrm{F}\left(33^{\circ} \mathrm{C}\right)$ for conventional heating systems, higher pressure drops across the valve are needed for good results (see Conventional Heating System Pressure Drops table below).
Conventional Heating System Pressure Drops

| Design Temperature <br> Load Drop ${ }^{\circ} \mathrm{F}\left({ }^{\circ} \mathrm{C}\right)$ | Recommended Pressure Drop* <br> (\% of Available Pressure) | Multiplier on <br> Load Drop |
| :---: | :---: | :---: |
| $60(33)$ or More | $50 \%$ | $1 \times$ Load Drop |
| $40(22)$ | $66 \%$ | $2 \times$ Load Drop |
| $20(11)$ | $75 \%$ | $3 \times$ Load Drop |

* Recommended minimum pressure drop $=5 \mathrm{psi}(34 \mathrm{kPa})$.

Secondary Circuits with Small Booster Pumps:13 50\% of available pressure difference (equal to the drop through load, or $50 \%$ of booster pump head).

# VB-9313 Water Flow Coefficient and Capacity 

## Proportional to Blend Water Flows

Proportional valves used to blend two water flows control the heat output by varying the water temperature to the load at constant flow. These valves do not require high pressure drops for good control results. They can be sized for a pressure drop of $20 \%$ of the "available pressure" or equal to $25 \%$ of the pressure drop through the load at full flow.

## Water Table

Water Capacity in Gallons Per Minute for VB-9313 Series.

| Valve Body Part Number | Cv Rating | Differential Pressure ( $\Delta \mathrm{P}$ in psi) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| VB-9313-0-5-16 | 390 | 390 | 552 | 675 | 780 | 872 | 955 | 1032 | 1103 | 1170 | 1233 | 1510 | 1744 | 1950 | 2136 | 2307 |

## Cv Equation

Where:
CV = Coefficient of flow
GPM $=$ U.S. gallons per minute $\left(60^{\circ} \mathrm{F}, 15.6^{\circ} \mathrm{C}\right)$
$\Delta \mathrm{P}=$ Differential pressure in psi (pressure drop)

## Cavitation Limitations on Valve Pressure Drop

A valve selected with too high a pressure drop can cause erosion of discs and/or wire drawing of the seat. In addition, cavitation can cause noise, damage to the valve trim (and possibly the body), and choke the flow through the valve.
Do not exceed the maximum differential pressure (pressure drop) for the valve selected.
The following formula can be used on higher-temperature water systems, where cavitation could be a problem, to estimate the maximum allowable pressure drop across the valve:
$\mathrm{Pm}=0.5(\mathrm{P} 1-\mathrm{Pv})$
Where:
$\mathrm{Pm}=$ Maximum allowable pressure drop
P1 = Absolute inlet pressure (psia)
Pv = Absolute vapor pressure (psia) (Refer to the table below.) Note: Add 14.7 psi to the gauge supply pressure to obtain the absolute pressure value.
For example, if a valve is controlling $200^{\circ} \mathrm{F}$ water at an inlet pressure of 18 psig, the maximum pressure drop allowable would be:
$\mathrm{Pm}=0.5[(18+14.7)-11.53]=10.6 \mathrm{psi}$ (Vapor pressure of $200^{\circ} \mathrm{F}$ water is 11.53 psi. )
Therefore, if the pressure drop for this valve is less than 10.6 psi, cavitation should not be a problem.

Systems where cavitation is shown to be a problem can sometimes be redesigned to provide lower inlet velocities. Valves having harder seat materials should be furnished if inlet velocities cannot be lowered.
For additional valve sizing information, see the $\mathrm{Vx}-8 \mathrm{xxx}$ Selection Guide, F-27199.
$C v=\frac{G P M}{\sqrt{\Delta P}}$
$\Delta P=\left(\frac{\mathrm{GPM}}{\mathrm{Cv}}\right)^{2}$
$G P M=C V \sqrt{\Delta P}$

## VB-8xx3/9313 Close-Off Pressure Capability

## Vapor Pressure of Water Table

| Water <br> Temp. <br> $\left({ }^{\circ} \mathrm{F}\right)$ | Vapor <br> Pressure <br> $(\mathrm{psia})$ | Water <br> Temp. <br> $\left({ }^{\circ} \mathrm{F}\right)$ | Vapor <br> Pressure <br> $(\mathrm{psia})$ | Water <br> Temp. <br> $\left({ }^{\circ} \mathrm{F}\right)$ | Vapor <br> Pressure <br> $(\mathrm{psia})$ | Water <br> Temp. <br> $\left({ }^{\circ} \mathrm{F}\right)$ | Vapor <br> Pressure <br> $(\mathrm{psia})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 40 | 0.12 | 90 | 0.70 | 140 | 2.89 | 190 | 9.34 |
| 50 | 0.18 | 100 | 0.95 | 150 | 3.72 | 200 | 11.53 |
| 60 | 0.26 | 110 | 1.28 | 160 | 4.74 | 210 | 14.12 |
| 70 | 0.36 | 120 | 1.69 | 170 | 5.99 | 220 | 17.19 |
| 80 | 0.51 | 130 | 2.22 | 180 | 7.51 | 230 | 20.78 |

## Seat Leakage Classes

| ANSI/FCI 70-2 <br> Leakage Class | Maximum Seat Leakage |
| :---: | :---: |
| Class II | $0.5 \%$ of rated CV |
| Class III | $0.1 \%$ of Rated CV |
| Class IV | $0.01 \%$ of Rated CV |
| Class V | 0.0005 ml per minute per inch of orifice <br> diameter per psi differential |

Close-off Ratings (Unless Otherwise Specified)
Nominal actuator close-off ratings are based on ANSI V with EPDM discs; and PTFE discs in steam applications. Metal-to-metal trim, such as brass 3-Way and high-temperature stainless, are designed for ANSI III (0.1-\% leakage).

Note: Valve body and actuator size determine the close-off capabilities.

VK-82xx with MK-6911

## Vx-8xx3 Series Balanced Globe Valve Assemblies

Schneider Electric VA, VF, VK, VK4, VS and VU-8xx3-xxx-5-P series valve assemblies are complete actuator/valve assemblies that accept two-position, floating, and proportional electric/electronic and proportional pneumatic control signals, for control of chilled water, hot water, or low pressure steam. These valve assemblies consist of pneumatic, electric, or electronic valve actuators either direct-coupled or linked to a $21 / 2^{\prime \prime} \ldots 6$ " 2 -Way or 3 -Way valve body with ASA flanged end connections.

## VB-8xx3 Series Valve Bodies

VB-8xx3-0-5-P valve bodies are also available separately to allow field mounting of a variety of Forta, Schneider Electric SmartX or pneumatic actuators using the appropriate linkage.

## Features

- Balanced plug design provides high close-offs using economical actuation
- Up to 125 psi ( 856 kPa ) close-off on 2-Way models, $35 \mathrm{psi}(240 \mathrm{kPa})$ on $3-W a y$ models
- Universal 3-Way valve can be piped in either mixing or Diverting configurations
- Valve sizes $21 / 2 " \ldots 6$ ", ASA 125 flanged
- A variety of Forta, Schneider Electric SmartX and pneumatic actuators are available, either as factory assemblies or for field assembly
- ANSI IV shutoff ( $0.01 \%$ of CV) on 2-Way models, ANSI III ( $0.1 \%$ of CV) on 3-Way models
- Self-adjusting spring loaded TFE/EPDM packing
- Normally open,normally closed, and non-spring return models available
- Expanded temperature range of $20^{\circ}$ to $281^{\circ} \mathrm{F}$
- ISO 9001:2000 Certified Quality Management System
- $\quad V x-9313$ 3-Way mixing valves offer many of the same features as the VB-8xx3 vales and a conventional mixing valve flow pattern.

Vx-8303/Vx-9313 with Mx61-720x Direct-Mounted Actuator
6. VB-8/9000 Series Valve and Actuator Assemblies

## Globe Valve Assembly Selection Procedure

When selecting a globe valve assembly, you must determine the applicable codes for the control signal type, valve body configuration, end connection, port size and actuator. Select a globe valve assembly part number as follows:

1. Control Signal Type, Valve Body Configuration and End Connection

Refer to Pg. 111, Ordering VB-8000, VB-9000 Valve Assemblies and select the appropriate codes for the part-number fields.

## 2. Valve Size (Flow Coefficient)

If the required flow coefficient (Cv) has not been determined, do so as follows:
a. Refer to Sizing and Selection to calculate the required Cv. b. Select the nearest available Cv value and corresponding valve body port code.

VB-8000, VB-9000 Assembly Selection Procedure

## 3. Actuator \& Linkages

Select the appropriate actuator and code, according to Assembly Ordering based on the control signal type, required valve normal position, and voltage requirements. For detailed actuator information, refer to the applicable actuator specifications on subsequent pages.

Note: Linkages shown in Specification tables are supplied with the actuator. When shown in Optional Accessories the linkage must be ordered separately.

## 4. Close-off Pressure

Confirm that the selected actuator and valve body combination provides sufficient close-off pressure. If no close-off pressure is shown, the valve body/actuator combination is not valid.

## 5. Available Space

If available space is a consideration, check the appropriate dimensions in the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.

## Specify Four Part Number Fields (1, 2, 4 and 6 below) to determine the Valve Actuator Assembly Part Number

## 1) Control Signal

Refer to the guide below.
2) Trim and Valve
Configuration
3) Pipe End
Connections

Flanged for all valves.

Actuator or Linkage

Refer to the following pages for Spring \& NonSpring Return Electric and Pneumatic Spring Return Actuator Codes, based on required close-off pressure.
5) Pattern $\begin{aligned} & \text { Code }\end{aligned}$

Specify Option 5 (Flanged) for all valves.
6) Port Code $\begin{aligned} & \text { Cv Value }\end{aligned}$

For water, steam, glycol and similar non flammable, non toxic fluids, choose based on capacity sizing in this chapter. Below $21 / 2^{\prime \prime}$, go to Pg. 25, 2. VB-7000 Series Globe Valves and Sizing and Selection.

## Ordering VB-8000, VB-9000 Valve Assemblies

NOTE: Threaded bodies are not available in size $21 / 2^{\prime \prime}$ and larger.

# VB-8XX3/9313 Close-Off Ratings 

The following tables offer a quick guide to valve actuator combination / close-off ratings. Please refer to specific close-off ratings.
VB-8xx3 and VB-9313 Close-off Ratings

a - VB-8xxx - First value $=$ maximum close off pressure, Second value $=$ maximum operating differential. (Example: 125/35).
b - VB-9213/VB-9223 2-Way valves have the same close offs as VB-9313 valves.
c - VB-8xx3 valves use AV-497 linkage, VB-9313 valves use AV-495 linkage.
d - AV-607-1 ( $21 / 2^{\prime \prime} \ldots 5^{\prime \prime}$ VB-8000 valves or $2^{1} / 2^{\prime \prime} \ldots 4^{\prime \prime}$ VB-9313 valves), the Mx41-634x actuator is not compatible with the AV-607-1 linkage.
e - AV-609-1 (6" VB-8000 valves or 5"...6" VB-9313 valves), the AV-609-1 linkage can be used with the M×41-634x actuator on 2
$1 / 2 " \ldots 5^{\prime \prime}$ VB-8000 valves or $21 / 2^{\prime \prime} \ldots 4^{\prime \prime}$ VB- 9313 valves, but the valve will stroke over a shorter portion of the control input signal
f - Stem up (B to AB flow, A port closed. stem down (A to AB flow, B port closed)
*d and $u$ indicate $d$ (stem down ) u ( stem up)

a - For piping information refer to the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.
b - To determine a specific part number, see Pg. 111, VB-8000, VB-9000 Assembly Selection Procedure for the relevant part series.
$\mathrm{c}-\mathrm{kvs}=\mathrm{m}^{3} / \mathrm{h}(\Delta \mathrm{P}=100 \mathrm{kPa}) \quad \mathrm{kvs}=\mathrm{Cv} / 1.156 \quad \mathrm{Cv}=\mathrm{kvs} \times 1.156$
d - Close-off ANSI III (0.1\%) for metal-to-metal seats with pressure at inlet (port A).
e - Dual actuators are not available as factory assemblies.
$f$ - Mx41-634x actuators used on $21 / 2^{\prime \prime}$ to $4^{\prime \prime} V x-9313$ will stroke over a shorter portion of the control input signal.

## 6. VB-8/9000 Series Valve and Actuator Assemblies

## VB-82x3 2-Way Globe Valves with Pneumatic SR Actuators

## 2-Way Valves

Choose a valve assembly with a maximum operating differential pressure capability sufficient for the application. Consult the table below for close-off pressure ratings. Not all actuator and valve body combinations are offered as factory assemblies.

a - Spring range field adjustable with positive positioner.
b - AK-42309-500 positive positioner optional for $21 / 2 " \ldots 5$ " valve, required for 6 " valve. Supplied as standard on VK4 factory
valve assemblies. See Pg. 111, VB-8000, VB-9000 Assembly Selection Procedure for the relevant part series to determine a specific part number.
$\mathrm{C}-\mathrm{C}_{\mathrm{v}}=\frac{\mathrm{gpm}}{\Delta \mathrm{P}}$ (where $\Delta \mathrm{P}$ is measured in psi) $\mathrm{Kvs}=\mathrm{Cv} / 1.156 \quad \mathrm{~K}_{\mathrm{vs}}=\frac{\mathrm{m}^{3} / \mathrm{h}}{\Delta \mathrm{P}} \quad($ where $\Delta \mathrm{P}$ is measured in bar; $1 \mathrm{bar}=100 \mathrm{kPa})$
d - Maximum allowable differential across the valve in any open position. Less than 20 psi recommended for quieter service.
Consult close-off pressure ratings.

## 3-Way Valves

Choose a valve assembly with a maximum operating differential pressure capability sufficient for the application. Not all actuator and valve body combinations are offered as factory assemblies.

a - Spring range field adjustable with positive positioner.
b - AK-42309-500 positive positioner optional for $2 \frac{1}{2}$ "... 5 " valve, required for 6 " valve. Supplied as standard on VK4 factory valve assemblies. See "Pg. 111, VB8000, VB-9000 Assembly Selection Procedure for the relevant part series to determine a specific part number.
$\mathrm{C}-\mathrm{C}_{\mathrm{v}}=\frac{\mathrm{gpm}}{\Delta \mathrm{P}}$ (where $\Delta \mathrm{P}$ is measured in psi) kvs $=C v / 1.156 \quad \mathrm{~K}_{\mathrm{vs}}=\frac{\mathrm{m}^{3} / \mathrm{h}}{\Delta \mathrm{P}} \quad$ (where $\Delta \mathrm{P}$ is measured in bar; $1 \mathrm{bar}=100 \mathrm{kPa}$ ).
$d$ - Maximum allowable differential across the valve in any open position. Less than 20 psi recommended for quieter service. Consult close-off
pressure ratings.
$\mathrm{e}-$ Mixing configuration, ports A and B are inlets, AB port is outlet.
f - Diverting configuration, flow $A B$ to $A$ port.
$g$ - Diverting configuration, flow $A B$ to $B$ port.
h-All flow configurations, mixing or Diverting.

## 6. VB-8/9000 Series Valve and Actuator Assemblies

## VB-9313 3-Way Globe Valves with Pneumatic SR Actuators

Select Actuator or Actuator Code ( xxx ) having sufficient close-off for the application. If selecting component parts, select Positive Positioner, if required. NOTE: For higher close-offs, use VB-8303 balanced valves with common bottom port.

## $21 / 2^{\prime \prime} \ldots 6^{\prime \prime}$ Flanged Globe Valves with Pneumatic Actuators

$\left.\begin{array}{|c|c|c|c|}\hline \text { Actuator } & \text { MK-6811 } & \text { MK-8811 } & \text { MK-8911 } \\ \hline \text { Effective Area (stroke) } & 50 \text { Sq. In. } & 100 \text { Sq. In. } & 100 \text { Sq. In. } \\ \left(1^{\prime \prime} \text { Stroke }\right)\end{array}\right]$

Actuator Close-Off Pressure Rating (psi) ${ }^{\text {ab }}$

| Supply Air Pressure (psig) |  |  |  | 15/20 | 15 | 20 | 15/20 | 15 | 20 | 15/20 | 15 | 20 |

# Pneumatic Positive Positioning Relay for VB-7/8/9xxx 

MORE INFO
Scan the QR code or visit the link below for more information.

Visit:
http://goo.gl/LJCLEb

## Positive Positioning Relay

Positive positioner pneumatic relay is used to accurately position an actuator stroke with respect to signal pressure from the controller. It can also be used to change the effective spring range of an actuator and increase the capacity of a controller.

## Features

For accurate positioning of valve and damper actuators, this positioner utilizes a pilot-operated, relay-type position-sensing mechanism, much more sensitive to actuator position changes than some competitive"force-balance" positioners.

| Model Number | Description |
| :---: | :---: |
| AK-42309-500 | Positive Positioning Relay with Mounting Linkage. |

Note: This model cannot be used with M556, M572, M573, M574, and MK-12000 Series actuators. Use N800-0555 positioner with M556, M573, and M574.

| Specifications |  |
| :---: | :---: |
| Action | Direct (increase in output pressure to actuator with an increase in pilot pressure from controller). |
| Pilot input | 0 to main air pressure, psig. |
| Output | 0 to main air pressure, psig. |
| Construction |  |
| Housing | Polysulfone |
| Diaphragm | Neoprene |
| Start point | Adjustable 1...12 psig (7... 83 kPa ). |
| Span | Adjustable $2 \ldots . .13 \mathrm{psi}(14 \ldots 90 \mathrm{kPa})$; factory set: 5 psig . |
| Stroke | Adjustable 2... 13 psi (14 to 90 kPa ); factory set: 5 psig with feedback spring for $7 / 16$ to 5 " stroke. |
| Supply air pressure | Clean, oil free, dry air required (refer to EN-123). |
| Maximum | $30 \mathrm{psig}(207 \mathrm{kPa})$. |
| Nominal supply | $15 . .20 \mathrm{psig}(103 \ldots 138 \mathrm{kPa})$ |
| Environment |  |
| Ambient temperature limits | Shipping: - $40 \ldots 160^{\circ} \mathrm{F}\left(-40 \ldots 71^{\circ} \mathrm{C}\right)$. Operating: $32 \ldots 140^{\circ} \mathrm{F}\left(0 \ldots 60^{\circ} \mathrm{C}\right)$. |
| Humidity | 5...95\% R.H., non-condensing. |
| Locations | NEMA Type 1 (IP10). |
| Air connections |  |
| "M" and "B" | Barbed for 1/4" O.D. plastic tubing. |
| "P" | Dual-contoured for 1/4" O.D. and 5/32" O.D. tubing. |
| Air consumption (air compressor sizing) | $19 \mathrm{scim}(5.2 \mathrm{~mL} / \mathrm{s})$ at $20 \mathrm{psig}(138 \mathrm{kPa})$ supply. |
| Air capacity for sizing air mains | $20 \mathrm{scim}(5.5 \mathrm{~mL} / \mathrm{s})$. |
| Flow capacity | 860 scim ( $235 \mathrm{~mL} / \mathrm{s}$ ) at 20 psig ( 138 kPa ) supply. |
| Mounting linkage | All necessary linkage provided to assemble AK-42309-500 to the following actuator series; MK-6600, MK-6800, MK-6900, MK-8800 and MK-8900. |
| Dimensions | $21 / 2 \mathrm{H} \times 41 / 2 \mathrm{~W} \times 3 \mathrm{D}$ " ( $64 \times 114 \times 76 \mathrm{~mm}$ ). |

# Rack \& Pinion Linkages AV-607/609-1 

## Application

The AV-607-1 and AV-609-1 linkages are designed to link single or dual Schneider Electric SmartX spring return and non-spring return actuators to $1 \frac{1}{2} 2^{\prime \prime} \ldots 6^{\prime \prime}$ VB-9313 and $1^{1 / 2 \prime} \ldots 6^{\prime \prime}$ VB-8xx3 globe valves.

## Features

- Allows mounting of single or dual actuators Schneider Electric SmartX actuators
- AV-607-1 is compatible with Schneider Electric (Siebe, Barber-Colman, INVENSYS) $2^{11 / 2 "} \ldots 5^{\prime \prime}$ VB$8 x \times 3,2^{1 / 2} 2^{\prime \prime} . .4^{\prime \prime}$ VB-9313 and discontinued 2"...4" VB-9xxx valves and Schneider Electric SmartX actuators ${ }^{2}$
- AV-609-1 is compatible with Schneider Electric (Siebe, Barber-Colman, INVENSYS) 6" VB-8xx3, 5"...6" VB-9313 and 5" and 6" VB-92xx valves and Schneider Electric SmartX actuators ${ }^{2}$
- Maintenance-free construction
- Corrosion protected heavy-duty steel rack-and-pinion construction and metal housing
- Precision rack self aligns with the valve stem

2 - Check the appropriate valve selection guide for close-offs for your application. AV-607-1 and AV-609-1
replace AV-607 and AV-609 respectively

## VBBNBS and VB-2000 Series Ball Valve Assemblies

Ball Valve Assemblies

## 8. VBB/VBS and VB-2000 Series Ball Valve Assemblies

## Overview VBB/VBS Valves <br> with M2/M3 Actuators

## Application

The VBB and VBS Series valves with SmartX Actuators are 2-Way or 3-Way, 1/2" or 3/4", characterized ball valves. The M3 and M2 SmartX Actuators are direct coupled to the VBB/VBS Series valves and accept two-position, floating or proportional control signals from a DDC system, controller, or thermostat for control of hot or chilled water, or solutions of up to $60 \%$ glycol. Typical applications include VAV reheat, fan coil units, hot and chilled water coils in air handling units, heat pumps and unit ventilators.

## Features

- Easy product selection - all actuators fit all valve bodies.
- Fast, easy actuator installation - no linkage or tools required.
- Flow characterizing insert provides equal percentage flow characteristic for stable, accurate floating and proportional control.
- ANSI IV seat leakage (0.01\%) for both 2-Way and 3-Way valves (A and B port).
- Brass and stainless steel trim models.
- Cvs from 0.3... 10.
- Normally open, normally closed, and non-spring return assemblies available.
- Two-position, Floating or Proportional (0...5 Vdc, 0... 10 Vdc , $5 \ldots 10 \mathrm{Vdc}$, or $4 \ldots 20 \mathrm{~mA} \mathrm{dc}$ ).
- Proportional actuator is direct or reverse acting.
- RoHS Compliant (VBS Assemblies).
- Reach Compliant.

# M2/M3 and Valve Selection and Flow Direction 

## Ball Valve Assembly Selection Procedure

1. Select the actuator. When selecting a ball valve assembly, you must know the control signal type and voltage to first select an actuator. Consult the following tables: Table-1 covers two-position actuator specifications and model numbers, Table-2 covers floating actuator specifications and model numbers and Table-3 covers proportional actuator specifications and model numbers.
2. Select the valve body. The valve body model number is selected based on the line size ( $1 / 2^{\prime \prime}$ or $3 / 4^{\prime \prime}$ ), ball material trim, and flow coefficient (Cv/Kv) required. Consult Table-4 and Table-5 for brass trim valve body specifications and model numbers and Table-6 and Table-7 for stainless steel trim valve body specifications and model numbers. See "Flow Coefficient Selection" for information in determining the flow coefficient.

## Other considerations

1. General service conditions: Make sure the actuator is suitable for the anticipated ambient conditions and that the valve body is compatible with the system fluid temperature and pressure requirements.
2. Close-off pressure: Confirm that the VBB/VBS ball valve's close off rating is suitable for the valve control application.
3. Space requirements: If mounting space limitations are a consideration, check the actuator/valve assembly dimensions.
4. Pipe reducers: Refer to the tables herein (F-27395) for estimating effective Cvs when using pipe reducers.
5. Ordering information. You may order the actuator and valve body separately or as a factory assembly. To order a complete valve and actuator assembly, specify the valve body part number and the actuator part number separated by a "+." Example: To order actuator valve body VBB2N15 and M312A00 as a factory valve/actuator assembly, specify VBB2N15+M312A00.

## Flow Direction

A notch cut into the stem indicator at the tip of the valve stem is an external indicator of where the closed portion of the ball sits internally. Check the notch position prior to assembling the actuator to verify the ball is orientated in the correct plane.

b. Full Port Model without characterized disc.

Application Note for 2 and 3-Way Valves
VBB/VBS Series Ball Valves are Characterized Control Ball Valves designed so that flow through the A-port exhibits equal percentage flow, thus the A-port is the control port. In a 3-way valve, the B-port is the bypass port and flow through the B-port designed to be less than that of the A-port. In most applications, this reduced flow compensates for the pressure drop seen b. coil supplied by the A-port.

## 8. VBB/VBS and VB-2000 Series Ball Valve Assemblies

## Product Description

The Schneider Electric VA, VF, and VS-2xx3-xxx-9-xx series Ball Valve Assemblies are complete actuator/valve assemblies that accept twoposition, floating, or proportional control signals from a DDC system or a thermostat, for control of hot or chilled water, or solutions of up to $50 \%$ glycol. They consist of direct-coupled SmartX spring return or non-spring return actuators mounted on 2-way ( $1 / 2^{\prime \prime}$ to 3 ") and 3 -way ( $1 / 2$ " to 2 ") ball valve bodies. Typical applications include reheat on VAV boxes, fan coil units, hot and chilled water coils in air handling units, and unit ventilators.

> VB-2253-500-9-xx Body/Linkage Assembly with 2-Way Ball Valve

Ball valve body/linkage assemblies allow field mounting of SmartX actuators.

## Applicable Literature

For installation details and considerations,
refer to the full Selection Guide F-27086, Ball
Valve Assemblies with SmartX Actuators

# Features \& Benefits, and Ball Valve Assembly Selection 

| Feature | Benefit |
| :---: | :---: |
| Close-offs of 40 to 130 psi. | Accommodates most close-off requirements. |
| Available in full range of line sizes, $1 / 2^{\prime \prime}$ to $3^{\prime \prime}$ for 2-way valves and $1 / 2^{\prime \prime}$ to $2^{\prime \prime}$ for 3-way valves. | Satisfies a wide range of applications. |
| Cvs from 0.33 to 266. | Permits optimal valve sizing, minimizing the need for pipe reducers. |
| Flow characterizing insert, made of glass-filled Noryl $^{\text {TM }}$. | Provides equal percentage flow characteristic so that the heat output of the coil is linear with respect to valve position. |
| Available in both spring return and non-spring return models. | Allows power loss mode requirement to be met for any given application. |
| Utilizes SmartX Actuators with two-position, floating, and proportional control. | Models to fit a wide range of applications. |
| All VB-2000 models equipped with pigtail leads. | Eases installation. Reduced electrician costs. |
| Low-friction seals and o-rings. | Allows the use of lower-torque actuators, reducing cost. |
| Valve body made of forged brass ASTM B283-06. | Rated for static pressure of 360 psi at fluid temperatures of 20 to $250{ }^{\circ} \mathrm{F}(-7$ to 121 ${ }^{\circ} \mathrm{C}$ ). |
| ANSI Class IV (0.01\% of CV) shutoff with 2-way valves. | Allows accurate control, saves energy. |
| Choices of spring return direction. | Provides Normally Closed or Normally Open spring return. |
| Thermally isolated mounting plate. | Protects the actuator from excess cold or heat from chilled or hot water passing through the valve. Discourages condensation. |
| Ball Valve Body/Linkage Assemblies are available separately. They include anti-rotation clips for SmartX Actuators. | Increases flexibility and minimizes inventory. |

## Ball Valve Assembly Selection Procedure

When selecting a ball valve assembly, you must determine the applicable codes for the control signal type, valve body configuration, end connection, port size, and actuator. Select a ball valve assembly part number as follows:

1. Control Signal Type, Valve Body Configuration, and End Connection Refer to Ball Valve Assemblies and select the appropriate codes for these part number fields.
2. Valve Size (Flow Coefficient)

If the required flow coefficient (Cv) has not yet been determined, do so as follows:
a. Refer to Sizing and Selection to calculate the required Cv.
b. Select the nearest available Cv and corresponding valve body port code.
3. Actuator

Select the appropriate actuator and code according to Ball Valve Assemblies, based on the control signal type, required valve normal position, and voltage requirements. For detailed actuator information, refer to the applicable actuator specifications.
NOTE: If an actuator with auxiliary switch(es) is required, you may field-assemble a ball valve assembly using a ball valve body/linkage assembly (VB-2513-500-9-xx). For information on switch-equipped actuators, refer to actuator specifications.
4. Close-off Pressure

Confirm that the selected actuator and valve body combination provides sufficient close-off pressure. If no close-off pressure is shown, the valve body/actuator combination is not valid.
5. Available Space

Check the appropriate dimensional figure (Figure 1 through Figure 6) and its accompanying data table for dimension details.

## Specify Five Part Number Fields to determine the Valve Actuator Assembly Part Number

## Ordering SmartX $5 x x$ and $8 x x$ Ball Valve Assemblies

SmartX 5xx Actuators

| Material <br> $1=$ Nickel/Chromium <br> Plated Brass <br> $5=$ Stainless Steel $/ 3$ |
| :--- |

1 Normal position for 3-way spring return ball valve assemblies refers to $A$ to $A B$ ports.
3 Stainless steel ball is available only on 2-way versions.
4 2-way assemblies are only available in stainless steel; 3 -way only available in nickel/chromium plated

brass. Note: Not all model configurations are available as factory assemblies. You can purchase the the actuator
and a VB-22x3-500-9-xx valve body and linkage separately for field assembly.
SmartX 8xx Actuators

8. VBB/VBS and VB-2000 Series

Ball Valve Assemblies

## VB-2000 2-Way Ball Valve Assemblies with SmartX Actuators

a - For non-spring return, 2-way ball valve assemblies are shipped NO (normally open).
b - To find the corresponding flow coefficients for these port codes, refer to Pg. 144, VB-2000 Series Actuator Part Numbering
c - To determine a specific part number, identify the actuator's control signal type ("A," "F," or "S"), actuator code, and P code. Refer to Pg. 145, VB-2000 Series 2 and 3-Way Sizes, Port Codes, Cv/Kvs .

## 3-Way Mixing Assemblies Using SmartX Actuators

Note: Not all model configurations are available as factory assemblies. You can purchase the the actuator and a VB-2253-500-9-xx valve body and linkage separately for field assembly. All valve sizes - ANSI Class IV ( $0.01 \%$ of Cv) shut-off piped coil-side outlet to A.

Outputs
Electrical
Auxiliary Switches: Available when actuators are ordered as separate units. Auxiliary switches are not offered with factory ball valve assemblies.
Mx40-7043-501 and MS40-7043-MP5 One auxiliary switch available. SPDT 6 A resistive @ 24 Vac, adjustable 0 to $95^{\circ}$ (0 to 1 scale). Switch meets VDE requirements for 6 (1.5) A, 24 Vac
MA40-7040-501

Position Feedback Voltage

Control Mode One auxiliary switch available. SPDT 6 A resistive @ 250 Vac, adjustable 0 to $95^{\circ}$ ( 0 to 1 scale). Switch meets VDE requirements for 6 (1.5) A, 250 Vac.
For 2... 10 Vdc proportional actuators, the feedback signal is the same voltage range as the input signal. The feedback signal can supply up to 0.5 mA to operate up to four additional slave actuators (proportional (MS) models only). Switch provided for selection of direct acting or reverse acting control mode on proportional models

## 9. Zone Valves

PopTop ${ }^{\text {™ }}$ Modulating Spring Return Valves \& Actuators

## Spring Return

The most modern, cost-effective range of electrically operated, modulating, temperature control, Schneider Electric's patented equal percentage flow plug, standard in control valves up to 3.4 KV , is designed for applications requiring a constant, level temperature. These highly reliable valves are designed specifically for use in fan coil, VAV reheat, unit ventilators, air handling unit, baseboard and radiant applicatioans. The compact design installs in small compartments and still allows service access. Designed for use in closed hydronic heating and cooling applications.

## Features

- Rugged Brass forged 20.6 BAR rated valve body
- Patented equal percentage flow plug up to 3.4 Kv
- Kv 0.86 to 6.9
- Manual override
- Position indicator
- Thermoplastic enclosure
- Jumper selectable operating ranges
- 24 VAC, 3 -wire floating and 0-10 VDC, 0-5 VDC 5-10 VDC, or 4-20 mA proportional controls
- Chilled or hot water applications
- Time-out feature for extended life
- Meets or exceeds ANSI IV standard for close-off; equal to $0.01 \%$ of Kv
- UL Listed actuator

## PopTop™ Modulating Non-Spring Return Valves \& Actuators

## Non-Spring Return

All of our PopTop Modulating valves and actuators feature a position indicator, manual override, thermoplastic enclosure, and time-out option. Modulating valves are designed for a fan coil, VAV reheat, unit ventilator, air handling unit, baseboard and radiant applications.

Features

- Rugged Brass forged 300 psig rated valve body
- Patented equal percentage flow plug up to 3.4 Kv
- Kv 0.86 to 6.9
- Manual override
- Position indicator
- Thermoplastic enclosure
- Non-spring return operation
- Jumper selectable operating ranges
- 24 VAC, 3 -wire floating and 0-10 VDC, 0-5 VDC, 5-10 VDC, or 4-20 mA proportional controls
- Compatible with most DDC control systems
- Chilled or hot water applications
- Time-out feature for extended life
- Meets or exceeds ANSI IV standard for close-off; equal to $0.01 \%$ of Kv
- UL Listed actuator

## Specify Three Part Number Fields for the Valve and Three for Actuator Assembly Part Number

Ordering Modulating Zone Valve Assemblies

Available Actuators (2)

| Part Number | Action | Actuator Type | Option |
| :--- | :--- | :--- | :--- |
| AT13A00T | Spring Return | Three Wire Floating | With Time-Out |
| AT23A00T | Spring Return | Three Wire Floating | With Time-Out |
| AT33A000 | Non-Spring Return | Three Wire Floating | None |
| AT33A00T | Non-Spring Return | Three Wire Floating | With Time-Out |
| AP13A000 | Spring Return | Proportional | None |
| AP23A000 | Spring Return | Proportional | None |
| AP33A000 | Non-Spring Return | Proportional | None |

(1) This feature is standard for floating spring return actuators and must be included in the part number.
(2) If the actuator doesn't have a time-out feature then the controller needs to have a time-out feature.
(3) When ordering only a valve body make selections for the 3 configurable fields shown to derive a 6-digit number.
(4)

When ordering only an actuator, prefix with the letter A then make selections for the 3 configurable fields shown, to derive a 6-digit number (the 5th position is a double zero).

# 2-Position SR/NSR Zone Valves \& Assembly Ordering 

Two Position
Spring and Non-Spring Return

## AG, AH Series

## Features

- Hysteresis synchronous motor for long life.
- Spring return operation.
- Valve body rated for 300 psig (20.6 bar) static pressure.
- Available in a variety of voltages.
- Actuator mounts directly onto the valve body without the need for linkages or calibration.
- Manual opening lever (normally closed only).
- Actuator can be replaced without any tools, or removal of the valve from the system.
- VS series valves available for low pressure steam.

## Specify Five Part Number Fields for the Valve and Four for a 2-Position Zone Valve Assembly Part Number

Ordering 2-Position Zone Valve Assemblies

Body \& Actuator Combination Requirements

| Temperature Configurations |  |
| :--- | :--- |
| Body Configuration | Actuator Spring Return Mode |
| V T $\times \times \times$ | A $\times \times 3 \times \times \times \times$ |
| T = General | $3=$ General Temperature |
| S = Steam | 4 = High Temperature |
| If body configuration is T, actuator temp. rating <br> can be 3 or 4 | If actuator temp rating is 3, body style must be T |
| If body configuration is S, actuator temp. rating <br> must be 4. | If actuator temp rating is 4, body style must be <br> S or T |

(1) When ordering only a valve body make selections for the five configurable fields shown to derive a 6-digit number.
(2) When ordering only an actuator, prefix with the letter A then make selections for the four configurable fields shown, to derive a 6-digit number (the 5th position is " 02 ").

## Modulating Spring and Non-Spring Return PopTop, Two-Way and Three-Way VM Assemblies Flow Patterns

## Piping

- The three-way is only configured as normally closed. For normally open configuration to the coil, turn the valve around. For proportional valves, set the control action (direct or reverse accordingly).
- The valve should be used in a closed-loop system.
- All valves must be piped so the plug closes against the direction of flow. For two-way valves, flow is from port $B$ to port $A$. For normally closed three-way valves, $B$ is the service port and $A$ is the bypass port. For normally open three-way valves, $A$ is the service port and $B$ is the bypass port.
- Three-way VM valves must be piped in a mixing configuration, not diverting.

CAUTION: Do not use VM series valves in "open" systems. Excess make-up water may cause damage to the valve.

Follow proper water treatment practices and system procedures. Refer to document F-26080; EN205, Water and Steam System Guidelines.

Note: Normally open actuators are not to be used on three-way valves to achieve normally open configurations. Use a normally closed actuator and pipe as shown in Figure-2.

Figure 1 Two-Way Valve Normally Closed.

Figure 3 Three-Way Valve B Port Piped to Coil Outlet Normally Closed.

Figure 2 Two-Way Valve Normally Open.

Figure 4 Three-Way Valve A Port Piped to Coil Outlet Normally Open

## Two-Position Spring Return PopTop Two-Way and Three-Way VT/VS Assemblies Flow Patterns

The VT/VS series are two-position spring return valves. When powered, the actuator moves to the desired position, tensing the spring return system. When power is removed the acutator returns to the normal position.
The VT/VS series two-position spring return valves can be purchased with an optional built-in auxiliary SPDT end switch for interfacing or signaling; for example, zone pump burner control.

## Product Description

Schneider Electric's butterfly valve line offers a wide range of two- and three-way sizes, along with electric non-spring return, and spring return actuator models that operate with on/off, floating, or proportional control signals. All assemblies include industry leading butterfly valve features, stainless steel double "D" shafts, nylon 11 coated ductile iron disc machined to provide bubble tight shut off, minimum torque, and longer seat life. The tongue and groove resilient seat design with molded in O-ring eliminates the use of flange gaskets and allows for ease of maintenance or replacement of the resilient seat. These features provide years of optimum performance and reliability.

## Applications

Typical applications include data centers, cooling towers, central system shutoff and bypass piping control, thermal storage, and chiller and boiler control. High Performance Butterfly Valves are ideally suited to both high pressure, high temperature, high cycle HVAC applications and mission critical HVAC applications. This includes chiller isolation, cooling tower isolation, change-over systems, large air handler's coil control, bypass and pro-
 cess control applications. With ANSI Class 150 rating, all valves are tested for bubble tight close-off to API 598 standards at maximum rated differential pressure.

## Standard Features

2...18" two-way assemblies and 2...16" three-way assemblies

- Chilled/hot water/glycol applications
- EPDM resilient seats with tongue and groove design and build in O-ring seal
- Stainless steel double D stem, requires no pins or screws to connect the disc and stem
- Extended neck design for temperature isolation and ease of insulation installation
- Nylon 11 coated ductile iron disc
- Wide choice of pneumatic and electric actuators and control signals
- Cast iron lug bodies mate with ANSI class 125/150 flanges
- Bubble tight shut off
- Bidirectional Flow
- Series S70 NEMA 4 actuators available in 24 or 120 Vac

## High Performance Features

- Double Offset Stem/Disc Design
- Reduced seat wear, zero leakage, and low torque
- Blow-out Proof Stem
- Safety and ease of use
- Energized RTFE Seat
- Zero leakage, self-adjusting for wear and easy field replacement

- Pressure Assisted, but not Pressure Dependent Seat Design
- Optimal performance and sealing at high or low differential pressures
- Adjustable PTFE Packing
- Packing can be adjusted while the valve is in service
- Dead End Rating Equal to Nominal Pressure Rating
- Allows the control valve to function as an isolation valve.

| Power Loss Mode | Non-spring return. |
| :---: | :---: |
| Control Signal |  |
| Actuator Code | Ex0 (120 Vac) or Fx0 (24 Vac) |
|  | On/off, floating |
| Actuator Code | Ex2 (120 Vac) or Fx2 (24 Vac) |
|  | Factory configured for |
|  | $4 \ldots 20 \mathrm{~mA}$ with a 250 W |
|  | input impedance, field |
|  | configrable for 0... 10 Vdc or |
|  | 2... 10 Vdc . |
| Power Requirements | 120 Vac or $24 \mathrm{Vac}, 50 / 60 \mathrm{~Hz}$. |
| E1x/F1x | $1.5^{\text {a }}$ |
| E2x/F2x,E3x/F3x | $2.1{ }^{\text {a }}$ |
| E4x/F4x,E5x/F5x,E6x | $3.0{ }^{\text {a }}$ |
| Environment | NEMA 4. |

| Ambient Temperatures | $\begin{gathered} -40 \ldots .150^{\circ} \mathrm{F} \\ \left(-40 \ldots 60^{\circ} \mathrm{C}\right) \end{gathered}$ |
| :---: | :---: |
| Regulatory Compliance | c-UL-us LISTED mark and CE mark |
| Standard Auxiliary Switch | (Included) 10 A resistive at $125 / 250 \mathrm{Vac}$, $1 / 2 \mathrm{~A}$ at 125 Vdc . |
| Heater | 15 W . |
| Manual Operator with Disconnect | Hand wheel with power disconnect provided on all S70 actuator models. |

## 10. Butterfly Valve Assemblies

## 2.5"...18" 2-Way High Performance Assemblies

## Product Description

Schneider Electric's High Performance Butterfly Valves are ideally suited to both high pressure, high temperature, high cycle HVAC applications and mission critical HVAC applications. This includes chiller isolation, cooling tower isolation, change-over systems, large air handler's coil control, bypass and process control applications.
With ANSI Class 150 rating, all valves are tested for bubble tight close-off to API 598 standards at maximum rated differential pressure.

Features

- Double Offset Stem/Disc Design
- Reduced seat wear, zero leakage, and low torque
- Blow-out Proof Stem
- Safety and ease of use
- Energized RTFE Seat
- Zero leakage, self-adjusting for wear and easy field replacement
- Pressure Assisted, but not Pressure Dependent Seat Design

## Specifications

| Service | Hot Water, Chilled Water, <br> Condenser Water, Steam |
| :--- | ---: |
| Fluid Temperature Limits | $-40 \ldots 500^{\circ} \mathrm{F}$ |
| Max Steam Pressure | On/Off 150 PSI <br> Proportional 50 PSI |
| Sizes | $2.5^{\prime \prime} \ldots 18^{\prime \prime}$ |
| Flow Characteristic | Modified Equal Percentage |
| Leakage | Bubble Tight |

- Optimal performance and sealing at high or low differential pressures
- Adjustable PTFE Packing
- Packing can be adjusted while the valve is in service
- Dead End Rating Equal to Nominal Pressure Rating
- Allows the control valve to function as an isolation valve.

| Materials | Carbon Steel |
| :--- | ---: |
| Body | $17-4$ Stainless Steel |
| Stem | 316 Stainless Steel |
| Disc | RTFE |
| Seat |  |

## 11. Pressure Independent Balancing and Control Valves and Actuators

## Product Description

The SmartX PIBCV range is a comprehensive selection of automatic balancing and control valves that provide flow limitation, with full control authority over hydronic regulation.
Automatic balancing within PIBCV valves provide stable flow regulation regardless of pressure fluctuations in the system and all valves have an adjustable flow limitation set point. The control valve portion of the PIBCV further regulates the water/ glycol flow from close-off up to the maximum flow limit setting.
Typical applications are temperature control of chillers, airhandling units, heat exchanges and terminal units such as fan coils, induction units and radiant panels.

## Features

- Reduced Energy Consumption
- Pressure independence ensures no overflow of water/ glycol through the valve. Limiting water/glycol flow to the design load of the coil has a significant effect on energy efficiency since systems operate for the majority of the time on a partial load.
- The overflow of water/glycol causes a degradation in heat transfer at the heat exchanger. Uncontrolled overflow of water/glycol beyond the design flow of the heat exchanger is an extremely wasteful and inefficient use of heat.
- The correct and maximum design flow ensures a high
differential in supply and return temperatures to provide high operational efficiency of the chiller or boiler.
- Improved Comfort
- The SmartX PIBCV valves are not affected by other valves in the system that may be opening and closing throughout the day or other piping system disturbances providing more constant, comfortable, room temperatures.
- Reduced Pumping Costs
- A reduction in overflows through the network reduces pumping costs. A smaller pump head and equipment is required compared to traditional configurations.
- Reduced Installation Costs
- Only one valve needs to be installed rather than two or three since the SmartX PIBCV covers the pressure balancing, flow limitation and control modulation.
- Easy and Quick Commissioning
- SmartX PIBCV setup time is significantly reduced with a simple and accurate flow setting procedure without the need for flow charts, calculations or measuring equipment.
- Improved Reliability
- Improved mechanical equipment reliability from reduced actuator movements.

## 11. Pressure Independent Balancing and Control Valves and Actuators

## Summary and Applications

## SmartX PIBCV Summary

SmartX PIBCV valves and Actuators can be used with actuators for pressure independent balancing and control applications or without actuators for automatic flow limiting balance applications.
PIBCVs immediately react to all changes in system pressures, providing stable valve control independent from the fluctuating pressures in the piping system. No valve authority, pressure calculations or complicated valve flow setting calculations are required. At partial system load there is no resulting overflow because the valve always limits the flow corresponding to the design flow of the coil.

SmartX PIBCV valves with actuators include an integrated control valve with flow regulation for HVAC applications, plus an automatic flow limiting function for energy efficiency. A full range of Schneider Electric actuators are available for every control application including two position, proportional, floating, spring return open, spring return close, and non-spring return.

## Applications

Variable flow systems: A SmartX PIBCV with a Schneider Electric actuator is used as a control valve for terminal units, like an AHU (Air Handling Unit), FCU (Fan Coil Unit) or radiation panel, and controls the required flow on every terminal unit maintaining hydronic balance in the system.
Constant flow systems: There are numerous applications in which SmartX PIBCV can be used. In a constant flow system with FCUs or in a one pipe heating system, SmartX PIBCVs can be installed as an automatic balancing valve in every riser. SmartX PIBCVs limit the flow to the set value, thus automatically achieving hydronic balance. Whenever an automatic flow limiter or a control valve is needed, the advantages of costsaving properties are inherent with SmartX PIBCVs. This includes systems with (floor) heating/cooling, concrete core activation or radiation panels.

# Theory and <br> Implementation 

## Theory

The SmartX PIBCV valve consists of two parts:

1. Differential Pressure Controller
2. Control Valve

## 1. Differential Pressure Controller (PC)

The differential pressure controller maintains a constant differential pressure across the control valve. The pressure difference is balanced so that when the differential pressure across the control valve changes (due to a change in available pressure, or movement of the control valve) the pressure regulator automatically aligns to a new position. This brings a new equilibrium and therefore keeps the differential pressure at a constant level.

## 2. Control Valve (CV)

The control valve has a linear characteristic. It features a stroke limitation that allows adjustment of the value. The maximum flow allowed by the control valve can be adjustable to a percentage of the valve's maximum flow rate.

## Control Performance

SmartX PIBCV actuators can be used to change the flow response from linear to logarithmic (equal percentage). This makes the SmartX PIBCV suitable for all applications, including AHUs, where the equal percentage characteristic is needed to get a stable control loop. The actuators can be switched from linear to equal percentage by changing a dipswitch setting.

## Easy Implementation

- No Cv or authority calculations needed. Flow is the only parameter to be considered when designing.
- Compact design, essential when only limited space is available such as in fan-coil units.
- Easy commissioning and troubleshooting. No specialized staff or measuring equipment needed.
- Trouble-free segmentation of the building project. SmartX PIBCVs will automatically control the flow, even when sections of the installation are unfinished. There is no requirement to re-adjust the SmartX PIBCV flow setting after finalization of the building project.

## Flow Direction

A SmartX PIBCV valve is mono-directional, meaning the valve operates when the arrow on the valve body is aligned with the flow direction. When this rule is ignored, the valve acts as a variable orifice that causes water/glycol hammer at sudden closing when available pressure has increased, or the valve has been set to a lower value.
In the case when a system condition allows backflows, it is strongly recommended to use a backflow preventer in order to avoid possible water/glycol hammer that can damage the valve as well as other elements in the system.
It is recommended to fit a strainer upstream of the valve to increase reliability and to follow water/glycol treatment guidelines as detailed in VDI 2035.
The pipework system should be flushed prior to the operation.

Valve Assembly Part Number System

* Determined by valve size and flow; see tables 23 \& 24

## SmartX PIBCV Selection Options

There are three methods for selecting SmartX PIBCV valves and Actuators:

1: Complete Method: Valve Assembly Selection
2. Custom Method: Valve Body and Actuator Field Assembly
3. Valve Only Method: Automatic Flow Limited Balance

## 1: Complete Method: Valve Assembly Selection

To select a PIBCV valve assembly select the required flow rate and actuator type. For example, to select a PIBCV valve assembly with a flow rate of 1.5 GPM and a non-spring return proportional actuator refer to Pg. 199, Table 1. Valve Assemblies ½..111/4" With Female NPT End Connectors, Without PT Ports .
Select the 1.5 GPM flow rate with the left column of the table. Select the actuator from the top row of the table.
The intersecting valve assembly part number from the left column and top row selections shows VP228E-15SN-L15-S101 which includes the set 1.5 GPM flow rate, installed actuator, female NPT end connectors, and metal tag with flow rate.
Specifications for the selected valve body actuators are in Pg. 200, Table 3. Specification $1 / 2 . .11 / 4$ " Valve Body Actuators and for the valve body in Pg. 204, Table 12. Specification Threaded Version, $1 / 2 . .2^{\prime \prime}$.

## 2. Custom Method: Valve Body and Actuator Field Assembly

Select the individual parts then set the flow rate and field assemble a valve assembly.
Pg. 204, Table 12. Specification Threaded Version, $1 / 2 . . .2$ " shows the valve body specifications and Pg. 211, Table 23. 1/2...2" Valve Flow Ranges (Qmin to Qnom) , and Pg. 212, Table 24. 21⁄2"... $10^{\prime \prime}$ Flanged Valve Flow Ranges (Qmin to Qnom), show the valve body flow rate ranges.
For example, to select a valve body that can be used in the flow rate range of 1 to 2 GPM, from Pg. 207, Table 17. Selection: $1_{2}{ }^{\prime \prime} . .2^{\prime \prime}$ Valve Body Tail Pieces, select the VP-228E-15BQSNT valve body that does not include PT ports, or select the VP-228E-15BSQ valve body if PT Ports are required.
Other larger valves could also provide the 1 to 2 GPM flow rates, but the VP-228E-15BQSNT was selected because it will be using a higher percentage of its flow range (in general, best accuracy is achieved when a higher percentage of flow rate is used).
The $1 / 2$ " to 2 " PIBCV valves use convenient valve body tail pieces for connection to the piping system.
From Pg. 207, Table 17. Selection: $1 / 2^{\prime \prime} . .2^{\prime \prime}$ Valve Body Tail Pieces , select the desired $1 / 2^{\prime \prime}$ tail piece - part number 9112108015 for Female NPT, 9112110015 for Male NPT, or 9112109015 for Sweat. Each tail piece part number includes two tail pieces.

Pg. 200, Table 3. Specification $1 / 2 . . .11 /$ " $^{\prime \prime}$ Valve Body Actuators shows the compatible actuators.

Select the MP131-24T for two position control, the MP131-24F for floating control, the MP-131-24MP for proportional control, the MP300SRU for spring return open universal control, or the MP300-SRD for spring return close universal control. Universal control actuators provide both proportional and floating input functionality. The valve body flow can easily be set before the actuator is installed as shown in the Pg. 198, PIBCV Flow Setting .

## 3. Valve Body Only: Automatic Flow Limited Balance Example

PIBCV valves can be used without actuators to limit the circuit flow to an adjustable flow rate.
Pg. 204, Table 12. Specification Threaded Version, $1 / 2 . .2^{\prime \prime}$ shows the valve body specifications and Pg. 207, Table 17. Selection: $1 / 2^{\prime \prime} \ldots 2^{\prime \prime}$ Valve Body Tail Pieces and Pg. 212, Table 24. 212"...10" Flanged Valve Flow Ranges (Qmin to Qnom) show the valve body flow rate ranges.
For example, to select a valve body that can be used in the flow rate range of 2 to 5 GPM from Table 23 select the VP229E-15BQHNT valve body part number. The $1 / 2$ " to $2^{\prime \prime}$ PIBCV valves use convenient valve body tail pieces for connection to the piping system.
From Pg. 207, Table 17. Selection: $1 / 2{ }^{\prime \prime} . .2^{\prime \prime}$ Valve Body Tail Pieces , select the desired 112 " tail piece: part number 9112108015 for Female NPT, 9112110015 for Male NPT, or 9112109015 for Sweat. Each tail piece part number includes two tail pieces.
The $11 / 2$ " and larger sized valves require a stem lock when used without an actuator as shown in Pg. 203, Table 11. Application: Operation of PIBCV Valve Body Without Actuator (which also shows application information for the valve bodies without actuators). The valve body flow can easily be set as shown in the PIBCV Flow Setting Section.

## 11. Pressure Independent Balancing and Control Valves and Actuators

## PIBCV Flow Setting

## $1 / 2 . .11 / 4$ " Size Valves

The calculated flow can be adjusted easily without using special tools. To change the presetting (factory setting is $100 \%$ for separately purchased PIBCV valve bodies) follow the four steps below:
(1) Remove the black protective cover or the mounted actuator.
(2) Raise the green pointer
(3) Turn (clock wise to decrease) to the new presetting.
(4) Press the pointer back into the lock position. After the pointer is clicked back into place the presetting is locked.

The presetting scale indicates values from $100 \%$ flow to $20 \%$. Clock wise turning would decrease the flow value while counter clock wise would increase it.

Note:
1 turn = 5\%

PIBCV Flow Setting 5"...10"

Example: VP229E-15HN
With this $1 / 2$ " valve the nom flow
$=5 \mathrm{gal} / \mathrm{min}=100 \%$ presetting.
To set a flow of $4 \mathrm{gal} / \mathrm{min}$ you have to set: $4 / 5=80 \%$.
Schneider Electric recommends a presetting/flow from 20\% to 100\%. To set a PIBCV valve to a $Q_{\text {high }}$ setting above $100 \%$, turn the green pointer counter clock wise from $100 \%$. The $Q_{\text {high }}$ setting is the scale setting plus $90 \%$. For example, to set the VP229E-15HN to a flow rate of $5.5 \mathrm{gal} / \mathrm{min}$, set $5.5 / 5.0=110 \%$ setting. Obtain the $110 \%$ setting by turning the green pointer counter clock wise from 100\% to 20\% (20\% and $90 \%=110 \%)$. As shown on page $204, Q_{\text {high }}$ settings above $100 \%$ slightly increase the valve's required minimum differential pressure.

| 1630 (min. 652) | 10 | VP222A-250H-1630-U181 |

* Factory set. Complete flow ranges are shown in tables for 8" and 10 " on page 205 and page 212.

Table 10. Specification 8" and 10" Valve Body Actuators

| 8" and 10" Valve Body Actuator Part Number <br> (actuator code) | MP4000 (U181) |  |  |
| :--- | ---: | :---: | :---: |
| Input Signal | Proportional, $0 \ldots 10 \mathrm{Vdc}, 2 \ldots 10 \mathrm{Vdc}, 0 \ldots 20 \mathrm{~mA}, 4 \ldots 20 \mathrm{~mA}$, with selectable input signal action and Floating, |  |  |
| DIP swtich selectable |  |  |  |

a. When used with a proportional input signal.

All actuators are $24 \mathrm{Vac} .50 / 60 \mathrm{HZ}$ with conduit connector holes and wiring terminal block, manual override.
Table 11. Application: Operation of PIBCV Valve Body Without Actuator
Operation of the PIBCV valve body without an actuator for an automatic flow limiting balancing application.

| PIBCV Valve Size | Valve Body Series | Valve Stem Lock Part Number | Recommended Installation and Valve Shut Off Capability |
| :---: | :---: | :---: | :---: |
| 1/2"...1-1/4" | VP228E-xxxxxxx, <br> VP229E-xxxxxxx | Use black cap provided with VP228Exxxxxxx or VP229E-xxxxxxx valve body | Install valve in the supply water pipe for best shutoff valve performance. To shutoff valve tighten black cap (max. close off pressure is 14.5 psi$)$. To shut off against a higher differential pressure set the valve flow to $0 \%$. |
| 1-1/2", $2^{\prime \prime}$ | VP220E-xxxxx |  | Install valve in either the supply or return water pipe. To shutoff valve tighten bottom knob (max. close off pressure is 232 psi) |
| 2-1/2" ... ${ }^{\prime \prime}$ | VP220A-xxxxx | 9114070000 (not included with valve body) | Install valve in either the supply or return water pipe. To shutoff valve tighten bottom insert with a 8 mm allen wrench (max. close off pressure is 232 psi ) |
| 5"...6" | VP221A-xxxxxx | 9114071000 (not included with valve body) | No shut off knob, set the valve to a 0\% flow setting to shutoff flow |
| 8"...10" | VP222A-xxxxx | 9114072000 (not included with valve body) |  |

The 9114070000 , 9114071000 , and 9114072000 Valve Stem Locks are secured to the valve body with a 10 mm allen wrench.
See Pg. 206, Table 15. Assembly Valve Body Configurations for a listing of all PIBCV valve body part numbers.

Note: Water/glycol Compatibility: It is the responsibility of the installer or product specifier to verify water/glycol compatibility of the valves construction materials with the supplier of water/glycol treatment/heat transfer solution.

1) See Pg. 206, Table 15. Assembly Valve Body Configurations for a listing of all PIBCV
valve body part numbers.
Factory setting of the valve is done at $Q_{\text {nom }}$ ( $100 \%$ ) or lower depending on flow rate ordered.
Regardless of the setting, the valve can modulate below $1 \%$ of set flow.
2) $\Delta p=$ (P1-P3) min $\sim \max$
3) $87 \mathrm{psi} \Delta \mathrm{p}$ is possible if consideration has been made to the flow velocity, cavitation and noise. For application usage please speak with Product Support

# MP131-24T, 24F, 24MP Floating and Proportional <br> Actuators 

## Actuators for Floating and Proportional Control

## Product Description

MP131 actuators are used together with automatically balanced combination valve type SmartX PIBCV for $1 / 2^{\prime \prime}$ to $1-1 / 4$ ". Typical applications are temperature control and permanent automatic balancing on terminal units (fan-coils, chilled ceilings, air-handling units).

## Specifications

| Part Numbers | MP131-24F, MP131- <br> 24MP, MP131-24T |
| :--- | ---: |
| Power supply | 24 Vac +10... -15 \% |

## Features

- Gap detection at stem up position
- 3 point version
- Force switch-off at stem down position prevents overload of actuator and valve
- No tools required for mounting
- Maintenance-free lifetime
- Low-noise operation

## Dimensions (mm)

## Mounting and Installation

The actuator should be mounted with the valve stem in either horizontal position or pointing upwards. The actuator is fixed to the valve body by means of a ribbed nut which requires no tools for mounting. The ribbed nut should be tightened by hand.

1. Check the valve neck. The actuator should be in stem up position (factory setting) and mounted securely on the valve body.
2. Wire the actuator according to the wiring diagram.
3. Stem movement is indicated by the Position Indicator (a small pin riding in a channel as shown in (1) below).

# 11. Pressure Independent Balancing and Control Valves and Actuators 

Spring Return Multi-signal Actuators for VP228E/VP229E SmartX PIBCV, DN10-32 (1/2"-11/4")

## Product Description

MP300-SRU/SRD actuators with Floating and Proportional control are low voltage motoric actuators for the SmartX PIBCV DN10-32 (1/2"...11/4") Valves. These actuators have a spring return safety function that provides for an open or close valve in the event of power loss. The Spring return safety function should not be used for two position control.

## 11. Pressure Independent Balancing and Control Valves and Actuators

## Multi-Signal Non-Spring/Spring Return Actuators for VP220x SmartX PIBCV, DN40... 100 (112...4")

## Product Description

MP500C are linear electro-mechanical actuators for use with VP220x SmartX PIBCV valves, DN40...100, controlled by either an increase/decrease floating signal or by a range of modulating control signals in the range $0 \ldots 10 \mathrm{~V}$. SRU/SRD models have a spring return feature. The U-Bolt connection allows quick and easy direct mounting onto the SmartX PIBCV VP220 valves.

# MP500C, MP500C-SRU/SRD Multi-Signal Actuators 

## Features

- Brushless DC motor.
- High resolution control board allows precise fluid control.
- Working range and end point switches adjusted automatically to the stroke of the valve.
- When driven electrically, firmware calibrates a consistent running time regardless of the valve stroke.
- During power loss SRU/SRD spring return drives the motor, generating power to the board, controlling braking speed which avoids mechanical stress and system water hammer.
- Actuators can be configured for either 3 point increase/ decrease signal or various modulating control signals including sequencing.
- Stroke Indicators on the yoke provide clear visual indication of the valve opening/stroke status.

## 11. Pressure Independent Balancing and Control Valves and Actuators

> SR and NSR Multi-Signal Actuators for VP221 SmartX PIBCV, DN125-150 (5"...6")

MP2000-SRU/SRD/NSR Multi-Signal Actuators

## Product Description

MP2000 SRU/SRD/NSR Actuators with spring return safety function and non-spring return are for fine regulation of large control valves under the demand of the HVAC controller. MP2000 SR can be controlled by either a modulating or a 3-point control signal and is used specifically with the VP221x SmartX PIBCV valves.

## Product Description

The MP4000 Actuator is primarily designed to regulate valves in response to the demand of a controller in HVAC systems. MP4000 can be controlled by electronic controllers with modulating or 3-point control output.

## Foot Mount Actuators

## Product Overview

MA－3／4xx Series：These actuators provide two－position operation of dampers，valves，and other equipment requiring the return to normal position upon power interruption．
MC－351／421／431：These actuators provide two－position operation of dampers or valves in heating，ventilating，and air conditioning sys－ tems，and similar applications where return－to－normal position is not required．
MP－3xx Series，MP－4xx Series，MP－2xxx Series，and MP－4xxx Series： These actuators are used for two－position，floating，and proportional control of dampers，valves，and program switches in heating，ventilat－ ing，air conditioning，and similar applications．Hazardous location models offer a sturdy cast aluminum case with bolted cover．They have two 3／4＂pipe tapped openings for joints with rigid metal conduit． All wiring is brought out to separate terminals for ease of installation． These factory enclosure and actuator assemblies are Underwriters Laboratories Listed．
MP－9xxx Series Reversible and Proportional Electric Actuators：These actuators provide control of heavy dampers，large valves，and other high torque applications in heating，ventilating，air conditioning，and similar applications which do not require return to a normal position．
The CP－8301－xXx electronic actuator drive is designed to process a variable 2 to 15 Vdc signal from a controller to provide proportional control of an electric gear train actuator．
The CP－8391－716 and 913 electronic actuator drives are designed to process a variable 4 to 20 mAdc signal from a controller to provide proportional control of an electric gear train actuator．
The CP－9301 and CP－9302 electronic actuator drives process a vari－ able input signal from a controller to provide proportional control of an electric gear train actuator．

## 12. Other Products

## Description

These actuators provide two-position operation of dampers, valves, and other equipment requiring the return to normal position upon power interruption.

Features

- SPST controller.
- Spring return.
- 24,120 and 240 Vac models.
- SPDT auxiliary switch if actuator part number suffix is "-500."
- Rugged die cast aluminum.
- Oil immersed motor and gear train.
- Models for hazardous locations are only available as a factory enclosure/ actuator assemblies
- NEMA 4 with optional watertight conduit connectors, field supplied.

## Specifications

## 12. Other Products

## Description

This actuator provides two-position operation of dampers or valves in heating, ventilating, and air conditioning systems, and similar applications where return-to-normal position is not required.
Features

- Two-position actuators controlled by SPDT controller.
- Non-spring return
- 24 and 120 Vac models available
- SPDT auxiliary switch is standard.
- Rugged die cast aluminum housings.
- Oil immersed motor and gear train.

Specifications

Three wire, SPDT snap acting switch provided by a thermostat, pressure switch, or relay

## 12. Other Products

## Description

The MP Series Actuators are used for two-position, floating, and proportional control of dampers, valves, and program switches in heating, ventilation, and air conditioning applications or similar applications.
Features

- Proportional actuators with built-in feedback potentiometers.
- Spring return and non-spring return models available.
- $24 \mathrm{Vac}, 120 \mathrm{Vac}$, and 240 Vac models are available.
- Die cast housings with four $1 / 2 \mathrm{in}$. conduit openings.
- Oil-immersed motor and gear train.

Specifications
Input Control signals: Refer to the Model Table for input control signal capability versus specific actuator models.

Floating
Requires one Single Pole Double Throw (SPDT) switch with floating (center off) position rated at 0.9 amps at 24 Vac or two Single Pole Single Throw (SPST) switches rated at 0.9 amps at 24 Vac

## Two-position

SPDT Requires snap acting switch rated at 0.9 amps at 24 Vac SPST

Microtherm
Proportional

Standard
Sequencing
Five-position
Slidewire and paralleling
Voltage Vdc (TAC System 8000)

Current mAdc Can be used with certain spring return actuators. Switch must be rated to handle actuator power requirements

Electrical system with the following typical controllers PP-22x Series, TP-1xx Series, TP-2xx Series, TP-3xx Series TP-4xx Series, TP-1xxx Series, and TP-1xxxx Series Control of a single actuator Control of two actuators in sequence Used typically for adjustable minimum position (five positions) of an economizer actuator Requires AE-504 paralleling relay AE-504 accepts $100 \Omega$ to $1000 \Omega$ slidewires Requires CP-8301-xxx or CP-9301-xxx Series of solid state actuator drives. ## Description

These actuators provide control of heavy dampers, large valves, and other high torque applications in heating, ventilating, air conditioning, and similar pplications which do not require return to a normal position.

Features

- High torque proportional gear train actuators accept the following signals:
- 100 to 1,000 slidewire (requires AE-504).
- SPDT floating or snap-acting controller.
- Variable Vdc.
- Variable mAdc.
- Torque to $1,600 \mathrm{lb}-\mathrm{in}$.
- Available in 120 Vac models.
- Standard SPDT auxiliary switch.
- Rugged die cast aluminum housings.
- Oil immersed motor and gear train.

# CP-8301 2... 15 Vdc Electronic Actuator Drive 

## Description

The CP-8301-xxx Series electronic actuator drive is designed to process a variable 2 to 15 Vdc signal from a controller to provide proportional control of an electric gear train actuator.

## Features

- Mounts directly onto proportional, electric, gear train actuators.
- 24 and 120 Vac models available.
- Color-coded pigtail leads.

## Description

The CP-8391-716 Series electronic actuator drive is designed to process a variable 4 to 20 mAdc signal from a controller to provide proportional control of an electric gear train actuator.

## Features

- Mounts directly onto proportional, electric, gear train actuators.
- 4 to 20 mAdc operating range. with 250 impedance with field adjustable ranges of 2 through 7, 2 through 12, 7 through 12, 4 through 12, and 12 through 20 mAdc.
- 120 Vac applications.
- Color-coded pigtail leads.

## 12．Other Products

## CP－8391－913 Series Electronic Actuator Drive

## Description

The CP－8391－913 electronic actuator drive is designed to process a variable 4 to 20 mAdc signal from a controller to provide proportional control of an electric gear train actuator．
Features
－Mounts directly onto proportional，electric，gear train actuators．
－Fixed 4 to 20 mAdc operating range．with $250 \Omega$ impedance．
－ 24 and 120 Vac models available．
－Color－coded pigtail leads．

## Specifications

## 12. Other Products

## Description

The CP-9301 and CP-9302 electronic actuator drives process a variable input signal from a controller to provide proportional control of an electric gear train actuator. The CP-9301 is preset at the factory for voltage input. The CP-9302 is factory preset for current input and has additional wiring for connection to an override switch, for those applications requiring an external override of the input signal. These drives are equipped with built-in jumpers and adjustable potentiometers, so that the type of input signal, deadband, input span, and start point may be reset in the field when necessary.

Features

- Mounts directly onto proportional, electric, gear train actuators.
- Power is supplied directly from the actuator.
- Jumpers for selecting either voltage or current input, as well as $3 \%$ or $5 \%$ deadband.
- Adjustable span and start point potentiometers.

Specifications

| Mounting | Directly to an actuator The drive may be mounted on either the left or right side of the actuator, in a conduit opening adjacent to the low voltage wiring compartment. |
| :---: | :---: |
| Case | Injection molded plastic with stamped aluminum cover |
| Inputs - Voltage and Current Input Refer to Model Table Input Span Adjustment Start Point Adjustment Input Impedance Voltage Input Current Input | Refer to Model Table Refer to Model Table <br> Greater than 10,000 $\Omega$ <br> $250 \Omega$ |
| Power Supply | Power shall be supplied directly from the shading coil windings provided on the shaded pole reversible motor of the gear train actuator (less than 30 Vac ) |

Outputs

a - Units with a "-2" suffix, e.g. MP-xxxx-xxx-2-x, include a built-in transformer (used for Microtherm ® or with AE-504) with secondary leads wired externally to terminals 7 (Blue, 12 $\mathrm{Vac})$ and 8 (Red, 24 Vac ) of the actuator.
Caution: When using the CP-9301 or CP-9302 with actuators containing an internal transformer, disconnect and tape off the red and blue leads before installing and powering the device. Failure to do so can result in damage to the actuator drive.
Note: Models prior to "-2" suffix had transformer wired directly to potentiometer. To disconnect the transformer, remove the back plate of the actuator, then disconnect and tape the transformer leads.

## Guide Specification Text

## Overview

This Guide Specification is specifically designed to empower specifiers with a tool that enables fast and simple specification of Schneider Electric valves and actuators. This comprehensive guide details both product and application specific information that assists specifiers in the selection process.

## Section 230900 - INSTRUMENTATION AND CONTROL FOR HVAC

### 2.15 ACTUATORS

## A. Electronic Direct Couple Damper (and Valve) Actuators

[Schneider Electric SmartX Actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric
2. Direct-coupled type non-hydraulic designed for minimum 100,000 full-stroke cycles at rated torque.
3. Direct-coupled damper actuators must have a five-year warrantee.
4. Size for torque required for damper seal at maximum design conditions and valve close-off pressure for system design.
5. Direct-coupled damper actuators should accommodate $3 / 8^{\prime \prime}, 1 / 2^{\prime \prime} 1.05^{\prime \prime}$ round or $3 / 8^{\prime \prime} \ldots 1 / 2^{\prime \prime}$ and $3 / 4^{\prime \prime}$ square damper shafts.
6. Actuator operating temperature minimum requirements: 44,88 and 133 lb .-in. are $-25^{\circ} \mathrm{F} \ldots 130^{\circ} \mathrm{F}$ $\left(-32{ }^{\circ} \mathrm{C} \ldots 55^{\circ} \mathrm{C}\right)$. The 30, 35, 60, 150 and 300 lb .-in. are $-25^{\circ} \mathrm{F} \ldots 140^{\circ} \mathrm{F}\left(-30^{\circ} \mathrm{C} \ldots 60^{\circ} \mathrm{C}\right)$. The 270 Ib.-in. are $-22^{\circ} \mathrm{F} \ldots 122^{\circ} \mathrm{F}\left(-30^{\circ} \mathrm{C} \ldots 50^{\circ} \mathrm{C}\right)$.
7. Overload protected electronically throughout rotation except for selected Floating actuators the have a mechanical clutch.
8. Spring Return Actuators: Mechanical fail safe shall incorporate a spring-return mechanism.
9. Non-Spring Return Actuators shall stay in the position last commanded by the controller.
10. Power Requirements: 24Vac/dc [120Vac] [230Vac]
11. Proportional Actuators controller input range from $0 \ldots 10 \mathrm{Vdc}, 2 \ldots 10 \mathrm{Vdc}$ or $4 \ldots 20 \mathrm{~mA}$ models.
12. Housing: Minimum requirement NEMA type 2
13. Actuators with a microprocessor should not be able to be modified by an outside source (cracked or hacked).
14. Actuators of 133 and 270 lb .-in. of torque or more should be able to be tandem mount or "gang" mount.
15. Agency Listings: ISO 9001, cULus, CE and CSA

## B. $1 / 2$ "... $3 / 4$ " Ball Valve Electronic Actuators

[Schneider Electric VBB/VBS ball valves actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Size for torque required for valve close-off pressure for system design.
3. Coupling: Direct coupled to the valve body without the use of external devices or tools (snap-on).
4. Auxiliary End Switch (optional) is to be SPST $24 \mathrm{Vac} / \mathrm{Vdc}, 101 \mathrm{~mA}$ to 5 mA maximum on selected two-position models.
5. Controller Signal Two-position, Floating or Proportional ( $0 \ldots 5 \mathrm{Vdc}, 0 \ldots 10 \mathrm{Vdc}, 5 \ldots 10 \mathrm{Vdc}$, or $4 \ldots 20$ $\mathrm{mA} \mathrm{dc})$. The design allows for changing selections via DIP switches without removal of cover.
6. Manual operating lever and position indicator must be standard on all models.
7. Power Requirements: 24 Vac for floating, proportional, and 110... 230 Vac for two position multivoltage types
8. Actuators must be available with either Spring Return (SR) or Non-Spring Return (NSR) models.
9. Operating Temperature Limit Floating is to be $32 \ldots 140^{\circ} \mathrm{F}\left(0 \ldots 60^{\circ} \mathrm{C}\right)$ Proportional $32 \ldots 140^{\circ} \mathrm{F}$ ( $0 \ldots 60^{\circ} \mathrm{C}$ ) Two-Position $32 \ldots 169^{\circ} \mathrm{F}\left(0 \ldots 76^{\circ} \mathrm{C}\right)$
10. Wiring (depending on model) Removable Terminal Block, 10 ft . ( 3.05 m ) Plenum Cable, 18 in . ( 45 cm) Appliance Wire
11. Locations must be rated NEMA 2, IEC IP31. (Indoor Use Only.) Actuators with terminal block or plenum cable leads are plenum rated per UL file number E9429.
12. Agency Listings: ISO 9001, cULus, and CE.
13. Schneider Electric shall warrant all components for a period of 5 years from the date of production.
C. 2-way ( $1 / 2$ "...3") and 3-way ( $1 / 22^{\prime \prime} . .2$ ") Ball Valve Actuators
[Schneider Electric VB-2000 ball valves actuators]
14. Manufactured, brand labeled or distributed by Schneider Electric.
15. Size for torque required for valve close-off pressure for system design.
16. Actuators are to be available in spring return (SR) and non-spring return (NSR) models. Spring Return (SR) actuators are to provide a choice to return direction.
17. Actuators are to be available in models for two-position, floating and proportional control.
18. All actuator models are to be equipped with pigtail leads
19. Actuators must be available in models with manual override.
20. Actuators must be available in models with auxiliary switch(es).
21. Operating temperatures: Non-Spring Return (NSR) actuators with 44 and 88 lb .-in. of torque must be -25 to $130{ }^{\circ} \mathrm{F}\left(-32\right.$ to $\left.55^{\circ} \mathrm{C}\right)$. All other actuators are -22 to $140{ }^{\circ} \mathrm{F}\left(-30\right.$ to $\left.60{ }^{\circ} \mathrm{C}\right)$
22. Actuators must be NEMA 2 rated.
23. All actuators are to have a five-year warranty.
24. Agency Listings: ISO 9001, cULus, and CE.
D. Zone Valve Actuators-Two-position Spring Return (SR)
[Schneider Electric Erie Zone Valve PopTop ${ }^{\text {TM }}$ Two-position valve actuators]
25. Manufactured, brand labeled or distributed by Schneider Electric.
26. Valves are to be two-position (On-Off), spring return (SR) with general or High Close Off models.
27. Actuator Voltage Models are $24 \mathrm{Vac} @ 50 / 60 \mathrm{~Hz}, 110 \mathrm{Vac} @ 50 \mathrm{~Hz}$ and $120 \mathrm{Vac} @ 60 \mathrm{~Hz}, 230 \mathrm{Vac}$ @ $50 \mathrm{~Hz}, 240 \mathrm{Vac}$ @ $60 \mathrm{~Hz}, 208 \mathrm{Vac}$ @ 50/60 Hz., 277 Vac @50/60 Hz.
28. End (auxiliary) Switch, $24-240$ Vac Models: 24... $250 \mathrm{Vac} / 101 \mathrm{~mA}$ min. to 5 A max. and 9... 30 Vdc @ 100 mA max. 277 Vac.
29. Actuators are to have manual override on normally closed (NC) models and assembles to valves without the use of tools, linkages or calibration.
30. Actuators are to have a hysteresis synchronous motor.
31. North America Agency Listings: UL873: Underwriters laboratories (Category Temperature Indicating and Regulating Equipment). CUL: UL Listed for use in Canada by Underwriters Laboratory. Canadian Standards C22.2 No. 24.
E. 2"...18" 2-way and 2"...16" 3-way Butterfly Valve Non-Spring Return (NSR) Linear Electronic Valve Actuators with Linkage Butterfly Valve Actuators
[Schneider Electric S70 red w/hand wheel, w/heater actuators]
32. Manufactured, brand labeled or distributed by Schneider Electric.
33. The butterfly valve actuators are to be Non-Spring Return (NSR) two-position and proportional taking $0 \ldots 10$ Vdc or $4 \ldots 20 \mathrm{~mA}$ models. All Actuators are to be NEMA 4, manual override (hand wheel) two auxiliary switches, and built-in heater.
34. Actuator close-offs and Cvs must be appropriate for the valve size in a typical HVAC application.
35. Actuators must be available in 24 Vac and 120 Vac models.
36. Actuators must have [Internal wiring isolation for parallel wiring multiple units that eliminates the risk of feedback from one actuator to another.
37. Proportional models must have feedback of $0 . . .10 \mathrm{Vdc}$ or $4 \ldots 20 \mathrm{~mA}$.
38. Actuator operating temperature shall be $-40 \ldots 150^{\circ} \mathrm{F}\left(-40 \ldots 60^{\circ} \mathrm{C}\right)$.
39. Actuator agency listings (North America) UL, CSA and CE.
F. 2"...4" 2-way and 3-way Butterfly Valve Spring Return (SR) Electronic Valve Actuators
[Schneider Electric SmartX M×41-7153 actuators]
40. Manufactured, brand labeled or distributed by Schneider Electric.
41. The butterfly valve actuators are to be Spring Return (SR) two-position and proportional taking 2... 10 Vdc or 4... 20 mA models. All Actuators are to be NEMA 2.
42. Actuator close-offs and Cvs must be appropriate for the valve size in a typical HVAC application.

## Guide Specification Text

4. Actuators must be available in 24 Vac models.
5. Actuators shall have two SPDT auxiliary switch models.
6. Actuators must have [Internal wiring isolation for parallel wiring multiple units that eliminates the risk of feedback from one actuator to another.
7. Proportional models must have feedback of $2 \ldots 10 \mathrm{Vdc}$ or $4 \ldots 20 \mathrm{~mA}$.
8. Actuator operating temperature shall be $-22 \ldots 140{ }^{\circ} \mathrm{F}\left(-12 \ldots 60^{\circ} \mathrm{C}\right)$
9. Actuators are to have a 5-year warranty.
10. Actuator agency listings (North America) UL, CSA and CE
G. 2"...6" 2-way and 3-way Butterfly Valve Non-Spring Return (NSR) Electronic Valve Actuators
[Schneider Electric SmartX NR-22xx-5xx actuators]
11. Manufactured, brand labeled or distributed by Schneider Electric
12. The butterfly valve actuators are to be Non-Spring Return (NSR) two-position and proportional taking $0 \ldots 10$ Vdc or $4 \ldots 20 \mathrm{~mA}$ models. All Actuators are to be NEMA 2.
13. Actuator close-offs and CVs must be appropriate for the valve size in a typical HVAC application.
14. Actuators must be available in 24 Vac models.
15. Actuators shall have two SPDT auxiliary switch models.
16. Actuators must have Internal wiring isolation for parallel wiring multiple units that eliminates the risk of feedback from one actuator to another.
17. Proportional models must have feedback of $2 \ldots 10 \mathrm{Vdc}$ or $4 \ldots 20 \mathrm{~mA}$.
18. Actuator operating temperature shall be $-22 \ldots 140^{\circ} \mathrm{F}\left(-12 \ldots 60^{\circ} \mathrm{C}\right)$
19. Actuators are to have a 5-year warranty.
20. Actuator agency listings (North America) UL, CSA and CE
H. $1 / 2 " \ldots 2$ " Bronze Body, Linear Electronic Valve Actuators with 67 or 78 lbs. of force. Globe Valve Actuators
[Schneider Electric MG350V]
21. Manufactured, brand labeled and distributed by Schneider Electric.
22. Actuator must have bi-color LED status indication for motion indication, auto calibration and alarm notification.
23. When the actuator is properly mounted must have a minimum of a NEMA 2 (IP53) rating.
24. Actuators are to be non-spring return.
25. Actuators are to be floating (used for two-position) or proportional models.
26. Proportional models will have optional models with a position output signal with field selectable $2 \ldots 10 \mathrm{Vdc}$ and $0 \ldots 10 \mathrm{Vdc}$ input signals and selectable input signal direct or reverse acting.
27. Actuator must have auto calibration which provides precise control by scaling the input signal to match the exact travel of the valve stem
28. Actuators must come in models with Pulse Width Modulated (PWM) with field-selectable 0.59 to 2.93 sec and 0.1 to 25.5 sec input signal ranges with a position output signal
29. Actuators must have manual override with automatic release.
30. Models with position feedback output signal include field selectable 2... 10 Vdc or $0 \ldots 5$ Vdc output signal
31. Removable wiring screw terminal with $1 / 2^{\prime \prime}$ conduit opening.
32. Actuator operating temperature ranges:
a. When controlling fluid up to $266^{\circ} \mathrm{F}\left(130^{\circ} \mathrm{C}\right)=$ ambient air temperature is to be $23 \ldots 131^{\circ} \mathrm{F}$ ( $-5 \ldots 55^{\circ} \mathrm{C}$ )
b. Fluid up to $281^{\circ} \mathrm{F}\left(138^{\circ} \mathrm{C}\right)=23 \ldots 127^{\circ} \mathrm{F}\left(-5 \ldots 53^{\circ} \mathrm{C}\right)$
c. Fluid up to $340^{\circ} \mathrm{F}\left(171^{\circ} \mathrm{C}\right)=23 \ldots 115^{\circ} \mathrm{F}\left(-5 \ldots 46^{\circ} \mathrm{C}\right)$
d. Fluid up to $400^{\circ} \mathrm{F}\left(204^{\circ} \mathrm{C}\right)=23 \ldots 102^{\circ} \mathrm{F}\left(-5 \ldots 39^{\circ} \mathrm{C}\right)$
33. Actuator agency Listings (North America)
a. cUL-us LISTED mark, per UL 60730-1 and -2-14 and CAN/CSA E60730-1 and -2-14 Automatic Electric Controls
b. NEMA 2
c. NEC class 2 FCC part-15 class B

## Guide Specification Text

d. Canadian ICES-003

f. Plenum rated per UL 2043

## I. $1 / 2$ "...2" Bronze Body, Linear Electronic Valve Actuators with 105 lbs. of force Globe Valve Actuators

[Schneider Electric SmartX Mx51-7103 Series Linear SR Valve Actuator]

1. Manufactured, brand labeled and distributed by Schneider Electric.
2. Actuators must have Two- Position, Floating, and Proportional models.
3. Proportional models will a controller input signal of either a $0 \ldots 10 \mathrm{Vdc}, 2 \ldots 10 \mathrm{Vdc}, 4 \ldots 20 \mathrm{mAdc}$,
$0 \ldots 3 \mathrm{Vdc}$, or $6 \ldots 9 \mathrm{Vdc}$. Control function direct/reverse action is switch selectable on most models.
4. Actuator force is to be 105 lb . ( 467 newton) with $1 / 2 \prime$ " ( 13 mm ) nominal linear stroke
5. Power requirements $24 \mathrm{Vac}, 120 \mathrm{Vac}$ or 230 Vac depending on model.
6. Actuator housings rated for up to NEMA 2/ IP54.
7. Actuator is to have overload protection throughout stroke.
8. Actuator Operating temperature $-22 \ldots 140^{\circ} \mathrm{F}\left(-30 \ldots 60^{\circ} \mathrm{C}\right)$.
9. Actuator must automatically set input span to match valve travel.
10. Actuator must have manual override to allow positioning of valve and preload.
11. Actuator is to be spring return.
12. Actuator is to mount directly to valves without separate linkage.
13. Actuator is to have a 5 -year warranty.
14. Actuator agency Listings (North America)
a. UL 873: Underwriters Laboratories (File \#E9429 Category Temperature-Indicating and Regulating Equipment).
b. CUL: UL Listed for use in Canada by Underwriters Laboratories. Canadian Standards C22.2 No. 24-93.
J. $\quad 1 / 2^{\prime \prime} \ldots 2^{\prime \prime}$ Bronze Body (and other valves) Linear Electronic Valve Actuators with 220 of force Globe Valve Actuators
[Schneider Electric SmartX Mx51-720x Series Linear SR Valve Actuator]
15. Manufactured, brand labeled and distributed by Schneider Electric.
16. Actuators must have Two- Position for a SPST controller, Floating for a SPST controller, and Proportional models will a controller input signal of either a $0 \ldots 10 \mathrm{Vdc}, 2 \ldots 10 \mathrm{Vdc}, 4 \ldots 20 \mathrm{mAdc}$, or $6 \ldots 9$ Vdc. Control function direct/reverse action is jumper selectable
17. Actuator is to be spring return.
18. Actuator will have 220 lb . force ( 979 newton) with $1 / 2^{\prime \prime}(13 \mathrm{~mm})$ or $1^{\prime \prime}(25 \mathrm{~mm})$ nominal linear stroke
19. Feedback on proportional model with $2 \ldots 10 \mathrm{Vdc}(\max .0 .5 \mathrm{~mA}$ ) output signal or to operate up to four like additional slave actuators.
20. Actuator operating temperature is $0 \ldots 140^{\circ} \mathrm{F}\left(-18 \ldots 60^{\circ} \mathrm{C}\right)$.
21. Actuator must automatically set input span to match valve travel
22. Actuator is to have a 24 Vac power supply on Two-position and Proportional models and 120 Vac on Two-position models.
23. Actuator is to be spring return.
24. Actuator housings rated for up to NEMA 2/ IP54
25. Actuator must have manual override to allow positioning of valve and preload
26. Actuator is to mount directly to vales without separate linkage.
27. Actuator is to have a 5 -year warranty.
28. Actuator agency Listings (North America)
a. UL 873: Underwriters Laboratories (File \#E9429 Category Temperature-Indicating and Regulating Equipment).
b. CUL: UL Listed for use in Canada by Underwriters Laboratories. Canadian Standards C22.2 No. 24-93.
K. $1 / 2$ "...2" Bronze Body, Spring Return (SR) Linear Electronic Valve Actuators with Linkage Globe Valve Actuators
[Schneider Electric SmartX Actuators]
29. Manufactured, brand labeled or distributed by Schneider Electric.
30. Actuators with $35,60,133$, or 150 lb .-in of force depending on model.
31. Actuator housings rated for up to NEMA 2/ IP54 with a 150 lb .-in. rated a NEMA 4.
32. Actuators are to be spring return.
33. Actuators are to have Two-position, Floating and Proportional models.
34. Actuators must have overload protection throughout rotation.
35. Actuator have an optional built-in auxiliary switch to provide for interfacing or signaling on selected models.
36. Actuators are to have a 5-year warranty.
37. Actuator agency listings (North America)
a. UL-873 Underwriters Laboratories
b. Canadian Standards C22-2 No.24-83, CUL
L. $\quad 1 / 2$ "...2" Bronze Body, Spring Return (SR) Linear Electronic Globe Valve Actuators with Linkage. NonSpring Return (NSR) Linear Valve Actuator with Linkage.
[Schneider Electric Forta M400A-VB, M800A-VB, M900A and M1500x-VB Screw Mounted on Venta VB7000s]
38. Manufactured, brand labeled or distributed by Schneider Electric.
39. Actuators are to be either floating SPDT control or proportional control 0...10, 2... 10 Vdc or $4 \ldots 20$ mA with a 500 -ohm resistor included.
40. Actuators are to be direct/reverse with selectable DIP switches.
41. Actuators are to have $90 \mathrm{lb} .(400 \mathrm{~N}), 180 \mathrm{lb} .(800 \mathrm{~N})$, or $337 \mathrm{lb} .(1500 \mathrm{~N})$ of force on Non-Spring Return (NSR) 157 lb . of force on the Spring Return model. Note: Not every actuator is for every valve.
42. Actuators are to be powered with 24 Vac or 24 Vdc .
43. All Non-Spring Return (NSR) actuators are to be NEMA 2, vertical mount only. Spring Return (SR) actuators are to have NEMA 4 models.
44. Actuators must have manual override to allow positioning of the valve.
45. Actuators must have selectable valve sequencing and flow curves of either equal percentage or linear.
46. Actuators must have feedback.
47. Actuators must have internal torque protection throughout stroke.
48. The operating temperature is to be:
a. $\quad 122^{\circ} \mathrm{F}\left(50^{\circ} \mathrm{C}\right)$ For chilled water applications
b. $\quad 113^{\circ} \mathrm{F}\left(45^{\circ} \mathrm{C}\right)$ ambient at $281^{\circ} \mathrm{F}\left(138^{\circ} \mathrm{C}\right)$ fluid temperature
c. $\quad 107^{\circ} \mathrm{F}\left(42{ }^{\circ} \mathrm{C}\right)$ ambient at $300^{\circ} \mathrm{F}\left(149^{\circ} \mathrm{C}\right)$ fluid temperature
d. $\quad 100^{\circ} \mathrm{F}\left(38^{\circ} \mathrm{C}\right)$ ambient at $340^{\circ} \mathrm{F}\left(171^{\circ} \mathrm{C}\right)$ fluid temperature
49. $90^{\circ} \mathrm{F}\left(32{ }^{\circ} \mathrm{C}\right)$ ambient at $366^{\circ} \mathrm{F}\left(186^{\circ} \mathrm{C}\right)$ fluid temperature
50. Actuator agency listings (North America) UL873, cULus, RCM, CE
M. $21 / 2 " \ldots 6^{\prime \prime}$ Cast Iron Flanged Globe Valve Body (and other valves) Non-Spring Return (NSR) Linear Electronic Valve Actuators with Linkage
[Schneider Electric Forta M800A and M1500A Tall U-Bolt Actuators]
51. Manufactured, brand labeled or distributed by Schneider Electric.
52. Actuators are to be either floating SPDT control or proportional control $0 \ldots 10,2 \ldots 10 \mathrm{Vdc}$ or $4 \ldots 20$ mA with a 500 -ohm resistor included.
53. Actuators are to direct/reverse acting with selectable DIP switch.
54. Actuators are to have 180 lb . $(800 \mathrm{~N})$ or 337 lb . $(1500 \mathrm{~N})$ of force.
55. Actuators will need a 24 Vac or Vdc power supply.
56. Actuators are to be rated NEMA 2, vertical mount only.

## Guide Specification Text

7. Actuators must have manual override to allow positioning of the valve.
8. Actuators must have selectable valve sequencing and flow curves of either equal percentage to linear. A 2... 10 Vac feedback.
9. Actuators must have [Internal torque protection throughout stroke.
10. The operating temperature is to be:
a. $\quad 122^{\circ} \mathrm{F}\left(50^{\circ} \mathrm{C}\right)$ For chilled water applications
b. $\quad 113^{\circ} \mathrm{F}\left(45^{\circ} \mathrm{C}\right)$ ambient at $281^{\circ} \mathrm{F}\left(138^{\circ} \mathrm{C}\right)$ fluid temperature
c. $\quad 107^{\circ} \mathrm{F}\left(42^{\circ} \mathrm{C}\right)$ ambient at $300^{\circ} \mathrm{F}\left(149^{\circ} \mathrm{C}\right)$ fluid temperature
d. $\quad 100^{\circ} \mathrm{F}\left(38^{\circ} \mathrm{C}\right)$ ambient at $340^{\circ} \mathrm{F}\left(171^{\circ} \mathrm{C}\right)$ fluid temperature
11. $90^{\circ} \mathrm{F}\left(32^{\circ} \mathrm{C}\right)$ ambient at $366^{\circ} \mathrm{F}\left(186^{\circ} \mathrm{C}\right)$ fluid temperature

N. $21 / 2^{\prime \prime} \ldots 6^{\prime \prime}$ Cast Iron Flanged Globe Valve Actuators 220 Ibs. force.
13. Actuators must have Two- Position for a SPST controller, Floating for a SPST controller, and Proportional models will a controller input signal of either a $0 \ldots 10 \mathrm{Vdc}, 2 \ldots 10 \mathrm{Vdc}, 4 \ldots 20 \mathrm{mAdc}$, or $6 \ldots 9$ Vdc. Control function direct/reverse action is jumper selectable.
14. Actuator is to be spring return.
15. Actuator will have 220 lb . force ( 979 newton) with $1 / 2^{\prime \prime}(13 \mathrm{~mm})$ or $1^{\prime \prime}(25 \mathrm{~mm})$ nominal linear stroke.
16. Feedback on proportional model with $2 \ldots 10 \mathrm{Vdc}(\max .0 .5 \mathrm{~mA}$ ) output signal or to operate up to four like additional slave actuators.
17. Actuator must automatically set input span to match valve travel.
18. Actuator Operating temperature $0 \ldots 140^{\circ} \mathrm{F}\left(-18 \ldots 60^{\circ} \mathrm{C}\right)$ up to a maximum valve fluid temperature of $300^{\circ} \mathrm{F}\left(149^{\circ} \mathrm{C}\right)$.
19. Actuator is to have a 24 Vac power supply on Two-position and Proportional models and 120 Vac on Two-position models.
20. Actuator housings rated for up to NEMA 2/IP54.
21. Actuator must have manual override to allow positioning of valve and preload.
22. Actuator is to mount directly to vales without separate linkage.
23. Actuator agency Listings: UL 873, CUL: UL.
O. $21 / 2^{\prime \prime} . .6$ " Cast Iron Flanged Globe Valve Actuators with Linkage SR.
24. Actuators with 60, 133, or 150 lb .-in of force depending on model.
25. Actuator housings rated for up to NEMA 2/ IP54 with a 150 lb .-in. rated a NEMA 4.
26. Actuators are to be spring return.
27. Actuators are to have Two-position, Floating and Proportional models.
28. Actuators must have overload protection throughout rotation.
29. Actuator have an optional built-in auxiliary switch to provide for interfacing or signaling on selected models.
30. Actuator agency listings: UL-873, C22-2 No.24-83, CUL.

## P. Pneumatic Globe Valve Actuators

[Schneider Electric MK Series die-cast aluminum housing actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Pneumatic actuators must have field replaceable neoprene diaphragms.
3. All actuators shall be Spring Return (SR) with the spring retracting actuator shaft and raising the valve stem on loss of are pressure.
4. Actuators must have an operating temperature of $-20 \ldots 220^{\circ} \mathrm{F}\left(-29 \ldots 104^{\circ} \mathrm{C}\right)$
5. Actuators shall be models with 6 sq. in. 11, 50 and 100 sq. in effective area for the psi to push against.
6. Actuators may not "spark" under normal conditions.
7. Actuators must except an optional positive pilot positioning relay.
8. Actuators will have a maximum air pressure of 30 psig.
9. Actuators must have models with spring ranges for typical HVAC applications.

## Q. Pneumatic Damper Actuators

[Schneider Electric MK-0000 die-cast aluminum housing actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Pneumatic actuators must have field replaceable neoprene diaphragms.
3. All actuators shall be Spring Return (SR) with the spring retracting actuator shaft on loss of are pressure.
4. Actuators must have an operating temperature of $-20 \ldots 160^{\circ} \mathrm{F}\left(-29 \ldots 71^{\circ} \mathrm{C}\right)$
5. Actuators shall be models with 8 sq. in. 11, 20 and 40 sq. in. (dual mounted) effective area for the psi to push against.
6. Actuators may not "spark" under normal conditions.
7. Actuators must except an optional positive pilot positioning relay. Relay is to be standard on 20 sq. in. models.
8. Actuators will have a maximum air pressure of 30 psig.
9. Actuators must have models with spring ranges for typical HVAC applications.

### 2.16 CONTROL VALVES

A. Zone Valves, Two-Position, Control Valves

## [Schneider Electric Erie zone valves]

1. Manufactured, brand labeled or distributed by Schneider Electric
2. Valve application are for hot and chilled water models, up to $50 \%$ glycol. Steam models up to 15 psi
3. Valve seat leakage is to ANSI class IV ( $0.01 \%$ ) with pressure at inlet (B-port/A-port, if 3-way).
4. Valves are to be: Body 300 psi rated forged brass, Stem-nickel plated, Seat-brass, Paddle-Buna N or highly saturated nitrile.
5. Valves are to be 2-way or 3-way with connections options of NPT (threaded female), Sweat (SW), Inverted flare (IFL), Society Automotive Engineers male (SAE) Rp Metric threaded female, depending on models, with end switch option on general temperature models.
6. Actuators are to be Spring Return (SR) normally open (NO) and normally closed (NC) models. Actuators are to have "High Close-off" models.
7. Valve line sizes are $3 / 4 ", 1 / 2^{\prime \prime}, 3 / 4^{\prime \prime}, 1^{\prime \prime}$, and $1 \frac{1}{4}$ " depending on model.
8. Valve CVs are to from 1 to 8 depending on model.
9. Actuators are to be UL listed

## Bronze $1 / 2$ "...2" Globe Control Valves

## [Schneider Electric Venta VB-7000 valves]

1. Control Valves: Factory fabricated, with body material, and pressure class based on maximum pressure and temperature rating of piping system with a body rating of not less than 400 psig at $150{ }^{\circ} \mathrm{F}, 321$ psig at $281^{\circ} \mathrm{F}$ per ANSI B16.15.
2. Valve Manufacturer: Must have at least 25 years of valve manufacturing and must meet the provisions of Section 1605 of the American Recovery and Reinvestment Act Buy American Requirements. Manufacturer shall water test all valves prior to shipment.
3. Valves two way NPS 2" and Smaller: Operator, stem and plug assembly, and spring-loaded PTFE/ EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Material grade properties must meet the fluid temperature and pressure requirements:
a. Standard duty bronze body, 316 stainless steel vertical stem, brass plug, soft seal, and bronze seat, renewable packing cartridge, and screwed/sweat/flared ends. Valves shall have allowable media temperature of $20^{\circ} \mathrm{F} \ldots 281^{\circ} \mathrm{F}$ to assure reliability with dual temperature applications.
b. Heavy duty bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, soft seal, and 316 stainless steel seat, renewable packing cartridge, and screwed ends. Valves shall have allowable media temperature of $20^{\circ} \mathrm{F} \ldots 340^{\circ} \mathrm{F}$ to assure to assure reliability with dual temperature applications.
c. High temperature bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, and 316 stainless steel seat, renewable packing cartridge, and screwed ends. Valves shall have allowable media temperature of $20^{\circ} \mathrm{F} \ldots 400^{\circ} \mathrm{F}$.
4. 2-way fluid system globe valves shall have the following characteristics:
a. Rangeability: Greater than 100:1 for all valves with flow coefficients of 0.4 and higher to provide stable control under light load conditions.
b. Maximum Allowable Seat Leakage: Standard and heavy duty valves must be designed to meet ANSI Class $V$ ( 0.0005 ml per minute per "of orifice diameter per psi differential) up to 35 psi close off differential pressure and ANSI Class IV seat leakage (maximum $0.01 \%$ of full open valve capacity) above 35 psi with appropriate actuator. High temperature valves must meet ANSI Class III seat leakage (maximum $0.1 \%$ of full open valve capacity).
c. The valve must be able to operate with a full-open operating differential of no less than 87 psi.
d. Flow Characteristics: Modified equal percentage characteristics for standard duty water applications and modified linear for heavy duty and high temperature steam applications with gradual opening for light loads.
e. Sizing:
a. Two Position Water: Line size or size using a differential pressure of 1 psi.
b. Modulating Water: 5 PSI or twice the load pressure drop.
c. Pressure drop across steam valve at a maximum flow of 80 percent of inlet pressure up to 15 psig and $42 \%$ of absolute (gage pressure +14.7 ) inlet pressure above 15 psig inlet.
d. $\quad 100 \mathrm{psi}$ saturated steam maximum inlet pressure for heavy duty bronze body globe valves $1 / 2^{\prime \prime} . . .2$ ".
e. 150 psi saturated steam maximum inlet pressure for high temperature bronze body globe valves $1 / 2^{\prime \prime} \ldots 2^{\prime \prime}$.
f. $\quad 35$ psi saturated steam maximum inlet pressure for standard duty bronze body globe valves $1 / 2$ "...2".
5. Valves 3-Way mixing (two inlets and one outlet) NPS 2" and Smaller:
a. Operator, stem and plug assembly, and spring-loaded PTFE/EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Material grade properties must meet the fluid temperature and pressure requirements:
a. Standard duty bronze body, 316 stainless steel vertical stem, brass plug, and bronze seat, renewable packing cartridge, and screwed or sweat ends. Valves shall have allowable media temperature of $20^{\circ} \mathrm{F} \ldots 281^{\circ} \mathrm{F}$ to assure reliability with dual temperature applications.
b. Heavy duty bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, and 316 stainless steel seat, renewable disc and packing cartridge, and screwed
ends. Valves shall have allowable media temperature of $20^{\circ} \mathrm{F} \ldots 340^{\circ} \mathrm{F}$ to assure reliability with dual temperature applications.
6. 3-Way mixing hydronic system globe valves shall have the following characteristics:
a. Rangeability: Greater than 100:1 for all valves to provide stable
b. Maximum Allowable Seat Leakage: A port must be designed to meet ANSI Class V (0.0005 ml per minute per "of orifice diameter per psi differential) up to 35 psi close off differential pressure and ANSI IV seat leakage (maximum $0.01 \%$ of full open valve capacity) above 35 psi with appropriate actuator. B port must meet ANSI Class III seat leakage (maximum 0.1\% of full open valve capacity).
c. The valve must be able to operate with a full-open operating differential of 87 psi .
d. Flow Characteristics: Modified linear characteristics with gradual opening for light loads.
e. Sizing: Modulating Water: Minimum 5 psi or at least equal to the load pressure drop.
7. Valves 3-Way diverting (one inlet and two outlets) NPS 2" and Smaller:
a. Operator, stem and plug assembly, and spring-loaded PTFE/EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Valves must be designed specifically for diverting service, and mixing valves designed for mixing service must not be used for diverting applications. Material grade properties must meet the fluid temperature and pressure requirements: Standard duty bronze body, 316 stainless steel vertical stem, brass plug, and bronze seat, renewable disc and packing cartridge, and screwed ends. Valves shall have allowable media temperature of $20^{\circ} \mathrm{F} \ldots 281^{\circ} \mathrm{F}$ to assure reliability with dual temperature applications.
8. 3-Way diverting hydronic system globe valves shall have the following characteristics:
a. Rangeability: Greater than 100:1 for all valves to provide stable control under light load conditions.
b. Maximum Allowable Seat Leakage: ANSI Class III seat leakage (maximum $0.1 \%$ of full open valve capacity).
c. Maximum Allowable Pressure Differential: 35 psi in.an open position.
d. Flow Characteristics: Modified linear characteristics with gradual opening for light loads.
e. Sizing:
a. Modulating Water: Minimum 5 psi or at least equal to the load pressure drop.
9. Required Certifications:
a. Pressure Equipment Directive (PED 97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals), Canadian Registration Number.
10. Valve and Operator:
a. To assure maximum performance and operation of the valve assembly both the valve and the actuator must be tested and approved by the valve manufacturer to assure compatibility of all components and performance to the specifications.

## 2"...6" Cast Iron Flanged Valves

[Schneider Electric VB-8000 and VB-9000 valves]

1. Bodies
a. Shall be American Factory fabricated with ASTM A 126 Class B cast iron body material with the pressure class within the maximum pressure and temperature rating of the piping system. (125 body rating with not less than 200 psig at $150^{\circ} \mathrm{F}$, decreasing to 169 psig at 281 F per ANSA B16.1)
2. Manufacturer
a. Shall have at least 25 years of valve manufacturing and meet the provisions of Section 1605 of the American Recovery and Reinvestment Act, buy American, requirements. All valves shall be water tested by manufacturer prior to shipment.
3. Serviceability
a. 2-Way valve operators, stem and plug assemblies and spring-loaded PTFE/EPDM valve stem packing cartridges must be removable for future replacement to restore the valves back to their original condition.
4. Construction
a. Material grades must meet the fluid temperature and pressure requirement temperatures of $20^{\circ} \mathrm{F} \ldots 281^{\circ} \mathrm{F}$ to assure reliability throughout all application temperature ranges.
5. Packings
a. Shall be cartridges suitable for replacement as units withstanding the full operating temperature ranges, including daily and seasonal fluctuations of water, $60 \% \mathrm{glycol}$ and steam fluids.
6. Characteristics
a. Rangeability: Two way,100:1 and greater for stable control under light load.
b. Shutoff, 2-Way: Leakage allowed: ANSI Class IV (0.01\% of max flow)
c. 3-Way: Leakage allowed: ANSI Class III ( $0.1 \%$ of max flow)
d. Flow curves: 2-Way modified equal percentage characteristic.
e. Mixing and Diverting: Linear, modified with gradual opening for light loads.
7. Piping
a. Diverting valves, with the common port at the bottom can be used for mixing.
b. Mixing valves with the common port at the end must not be used for diverting applications.
8. Sizing
a. Two Position Water: Line size or size using a differential pressure of 1 psi.
b. Modulating Water: 5 PSI or twice the load pressure drop
c. Steam, 2-Way: maximum pressure drop across the valve at a maximum flow of 80 percent of inlet pressure up to 15 psig. Above 15 psig inlet, $42 \%$ of absolute (gage pressure +14.7 ) inlet pressure.
9. Certifications for All Models
a. Pressure Equipment Directive (PED 97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals

## D. Steam Control Valves

1. $1 / 2$ "...2" Steam Service Designed Globe Valves
a. Body material, and pressure class based on maximum pressure and temperature rating of piping system with a body rating of not less than 400 psig at $150^{\circ} \mathrm{F}, 321 \mathrm{psig}$ at $281^{\circ} \mathrm{F}$ per ANSI B16.15.
b. High temperature spring-loaded PTFE/EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Material grade properties must meet the fluid temperature and pressure requirements:
a. Standard duty bronze body, 316 stainless steel vertical stem, brass plug, soft seal, and bronze seat, renewable packing cartridge, and screwed/sweat/flared ends. Valves shall have allowable media temperature of $20^{\circ} \mathrm{F} \ldots 281^{\circ} \mathrm{F}$ to assure reliability with dual temperature applications.
b. Heavy duty bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, soft seal, and 316 stainless steel seat, renewable packing cartridge, and screwed ends. Valves shall have allowable media temperature of $20^{\circ} \mathrm{F} \ldots 340^{\circ} \mathrm{F}$ to assure to assure reliability with dual temperature applications.
c. High temperature bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, and 316 stainless steel seat, renewable packing cartridge, and screwed ends. Valves shall have allowable media temperature of $20^{\circ} \mathrm{F}$... $400^{\circ} \mathrm{F}$.
c. Two-way fluid system globe valves shall have the following characteristics:
a. Rangeability: Greater than 100:1 for all valves with flow coefficients of 0.4 and higher to provide stable control under light load conditions.
b. Maximum Allowable Seat Leakage: Standard and heavy duty valves must be designed to meet ANSI Class V ( 0.0005 ml per minute per "of orifice diameter per psi differential) up to 35 psi close off differential pressure and ANSI Class IV seat leakage (maximum $0.01 \%$ of full open valve capacity) above 35 psi with appropriate actuator. High temperature valves must meet ANSI Class III seat leakage (maximum 0.1\% of full open valve capacity).
c. The valve must be able to operate with a full-open operating differential of no less than 87 psi.
d. Flow Characteristics: Modified equal percentage characteristics for standard duty water applications and modified linear for heavy duty and high temperature steam applications with gradual opening for light loads.
e. Sizing:
a. Pressure drop across steam valve at a maximum flow of 80 percent of inlet pressure up to 15 psig and $42 \%$ of absolute (gage pressure +14.7 ) inlet pres-
sure above 15 psig inlet.
b. $\quad 100 \mathrm{psi}$ saturated steam maximum inlet pressure for heavy duty bronze body globe valves $1 / 2^{\prime \prime} \ldots 2^{\prime \prime}$.
c. $\quad 150 \mathrm{psi}$ saturated steam maximum inlet pressure for high temperature bronze body globe valves $1 / 2^{\prime \prime} \ldots 2^{\prime \prime}$.
d. 35 psi saturated steam maximum inlet pressure for standard duty bronze body globe valves $1 / 2^{\prime \prime} \ldots 2^{\prime \prime}$.
f. Certifications for All Models: Pressure Equipment Directive (PED 97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals
2. $21 / 2^{\prime \prime} \ldots 6^{\prime \prime}$ Steam Service Designed Globe Valves
a. Bodies: Shall be American Factory fabricated with ASTM A 126 Class B cast iron body material with the pressure class within the maximum pressure and temperature rating of the piping system. (125 body rating with not less than 200 psig at $150^{\circ} \mathrm{F}$, decreasing to 169 psig at 281F per ANSA B16.1)
b. Serviceability: 2-Way valve operators, stem and plug assemblies and spring-loaded PTFE/ EPDM valve stem packing cartridges must be removable for future replacement to restore the valves back to their original condition.
c. Construction: Material grades must meet the fluid temperature and pressure requirement temperatures of $20^{\circ} \mathrm{F} \ldots 281^{\circ} \mathrm{F}$ to assure reliability throughout all application temperature ranges.
d. Packings: Shall be cartridges suitable for replacement as units withstanding the full operating temperature ranges, including daily and seasonal fluctuations of water, 60\% glycol and steam fluids.
e. Characteristics
a. Rangeability: Two way,100:1 and greater for stable control under light load.
b. Shutoff, 2-Way: Leakage allowed: ANSI Class IV ( $0.01 \%$ of max flow)
c. Flow curves: 2-Way modified equal percentage characteristic.
d. Sizing
a. Steam, 2-Way: maximum pressure drop across the valve at a maximum flow of 80 percent of inlet pressure up to 15 psig. Above 15 psig inlet, $42 \%$ of absolute (gage pressure + 14.7) inlet pressure.
b. Certifications for All Models: Pressure Equipment Directive (PED 97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals
E. $1 / 2 " . . .3 / 4$ " Ball Valve
[Schneider Electric VBB/VBS Ball Valves]
3. Manufactured, brand labeled or distributed by Schneider Electric.
4. $1 / 2^{\prime \prime}$ and $3 / 4$ " Ball Valves: Forged brass body rated at no less than 600 psi, chrome plated brass ball with blowout proof stem or optional stainless steel ball with blowout proof stem,
5. Valves are to be in 2-way and 3-way configurations.
6. Connection: Female NPT end fittings, Teflon® PTFE seat, characterizing disc glass-filled PEEK providing equal percentage flow curve on 2-way valve.
7. Operating Temperature $20 \ldots 250^{\circ} \mathrm{F}$ chilled or hot water with up to $60 \%$ glycol solution.
8. 2-way and Bypass port should be ANSI Class IV ( $0.01 \%$ of CV ) seat leakage.
9. Rangeability must be at least 300:1.
10. Tool-less actuator connection.
11. System Static Pressure Limit should be 600 psig ( 4137 Pa )
12. The manufacturer shall warrant all components for a period of 2 years from the date of production.

## Guide Specification Text

## F. 2-way ( $1 / 2$ "...3") and 3-way ( $1 / 2^{\prime \prime} \ldots 2$ ") Ball Valves

[Schneider Electric VB-2000 series]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Valves must be for control of hot or chilled water, or solutions of up to $50 \%$ glycol.
3. Ball valves must have close-offs of $40 \ldots 130$ psi depending on size.
4. Valves will provide Cvs from 0.33... 266 depending on size.
5. Valve characterizing insert, is to made of glass-filled Noryl ${ }^{\text {TM }}$ and provide equal percentage flow.
6. Valve body is to made of forged brass ASTM B283-06 and rated for static pressure of 360 psi at fluid temperatures of $20 \ldots 250^{\circ} \mathrm{F}\left(-7 \ldots 121^{\circ} \mathrm{C}\right)$.
7. All valves are to have balls made of nickel/chromium plated brass with 2-way valves having stainless steel balls as an option. All valve stems are to be stainless steel with reinforce Teflon® EPDM O-ring seals.
8. 2-way valves are to be ANSI Class IV ( $0.01 \%$ of Cv ) shutoff. 3-way valves are to be ANSI Class IV ( $0.01 \%$ of Cv piped coil-side outlet to the port A only.
9. Fluid (water) temperature are a minimum $20^{\circ} \mathrm{F}\left(-7^{\circ} \mathrm{C}\right)$ and a maximum of $250^{\circ} \mathrm{F}\left(121^{\circ} \mathrm{C}\right)$.
10. Valves will have a two warranty.
G. Pressure Independent Balancing Control Valves $1 / 2^{\prime \prime} \ldots 10^{\prime \prime}$
[Schneider Electric SmartX PIBCV]
When selecting pressure independent valves the specifier should also revise section 232113 to NOT include balancing valves and also modify section 230593 to NOT require the individual balancing of each coil/valve combination.
11. Manufactured, brand labeled or distributed by Schneider Electric.
12. NPS 2 and Smaller: PN 16, stainless steel components.
13. NPS $21 / 2$ through 10 : Class 125 cast iron body per ASME B16.1-2010, Material class B per ASTM A 126-04 (2014), stainless steel components.
14. Accuracy NPS $3 / 4$ " and Smaller: The control valves shall accurately control the flow from $0 \ldots 100 \%$ rated flow with a differential pressure range of $2.32 \ldots 58$ psi for low and standard flow units, 5...58 psi for high flow units within $5 \%$ of set flow value.
15. Accuracy NPS 1 through 1114: The control valves shall accurately control the flow from $0 . . .100 \%$ rated flow with a differential pressure range of $2.9 \ldots 58 \mathrm{psi}$ for standard flow units, $5 \ldots 58$ psi for high flow units within $5 \%$ of set flow value.
16. Accuracy NPS $1 \frac{1}{2}$ through 4: The control valves shall accurately control the flow from $0 \ldots 100 \%$ rated flow with a differential pressure range of $4.35 \ldots 58$ psi for standard flow units, 8.7 psi to 58 psi for high flow units within $5 \%$ of set flow value.
17. Accuracy NPS 5 through 10: The control valves shall accurately control the flow from 0...100\% rated flow with a differential pressure range of $5.8 \ldots 58 \mathrm{psi}$ for standard flow units, 8.7...58 psi for high flow units within $5 \%$ of set flow value.
18. Flow Characteristics: Linear Control, selectable to equal percentage at the proportional valve actuator.
19. Field adjustable flow by means of a percentage of rated valve flow.
20. Position feedback output signal integrated into all proportional actuators.
21. $100 \%$ authority with modulating below $1 \%$ regardless of flow settings.
22. No cartridges requiring replacement or maintenance.
23. Close off ratings shall be 232 psi for all valve sizes.

## H. Butterfly Valves

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Valve body are to be polyester coated iron ASTM A126 lug mating with ANSI class 125/150 flanges.
3. Disc Type: Ductile iron nylon 11 coated.
4. Valve Stem:
a. $2 \ldots 8$ " 416 stainless steel double $D$ stem.
b. 10...12" 316 stainless steel double D stem.
c. 14 " and larger: stainless steel round shaft woodruff key slot.
5. Valve Seat:
a. EPDM tongue and groove seat and molded O-ring flange seat
6. Flow Characteristics: Modified equal percentage.
7. Close-Off Pressure Rating: Bubble-tight shutoff (no leakage).
8. Valve Fluid Temperature Rating: $-40 \ldots 250^{\circ} \mathrm{F}\left(-40 \ldots 121^{\circ} \mathrm{C}\right)$
9. Valve will have two (2) inch extended neck (because of heat).
10. Valve must accept pneumatic or electric/electronic actuators
11. Valves must have a minimum of a two (2) year warranty.
I. High Performance Butterfly Valves
12. Manufactured, brand labeled or distributed by Schneider Electric.
13. Valve body are to be carbon steel with ANSI class 150 flanges
14. Disc Type: 316 stainless steel
a. Valve Stem: 17-4PH stainless steel
b. One-piece design
c. Blow out proof design
15. Valve Seat:
a. Resilient energizer totally encapsulated by the PTFE seat
b. Seat assembly locked in the body recess by full-faced seat retainer
c. Self adjusting for temperature changes and wear
16. Flow Characteristics: Modified equal percentage
17. Close-Off Pressure Rating: Bubble-tight shutoff (no leakage) at rated maximum differential pressure
18. Valve Fluid Temperature Rating:
a. $-40 \ldots 500^{\circ} \mathrm{F}\left(-40 \ldots 250^{\circ} \mathrm{C}\right)$
b. On/Off steam application max. 150 psi pressure
c. Proportional steam application max. 50 psi pressure
19. Valve will have extended neck (because of heat)
20. Valve must accept pneumatic or electric/electronic actuators
21. Valve must have a minimum two (2) year warranty

    PIBCV Valve Assembly Part Number System

[^2]:    a - For Honeywell Floor Mount Mod. Motor.
    b - For shafts $3 / 4$ " ( 19 mm ) round and $5 / 8^{\prime \prime}(15.9 \mathrm{~mm})$ square.
    c - For shafts $3 / 8^{\prime \prime}$...1/2" $(10 \ldots 13 \mathrm{~mm})$ round and square.
    d - Only used on Mx41-707x-xxx, Mx41-715x-xxx.

[^3]:    1- The Mx51-720x, Mx61-720x actuator are higher force versions of the Mx51-710x for large valves and high close-off applications.
    2- Forta actuators have universal inputs for proportional and floating operation.

[^4]:    a - AV-601 is not available as an assembly and has to be ordered separately.
    b - Add -S2 for auxillary switch. Only available as a field assembly.
    c - Add - 500 for auxillary switch. Only available as a field assembly.

[^5]:    a - To determine a specific part number, see Pg. 50, Ordering VB-7000 Globe Valve Assemblies for the relevant part series.
    $b-k v s=m^{3} / \mathrm{h}(\Delta \mathrm{P}=100 \mathrm{kPa}) \quad \mathrm{kvs}=\mathrm{Cv} / 1.156 \quad \mathrm{Cv}=\mathrm{kvs} \times 1.156$
    c - All $V x-72 x x$ leakage ratings are ANSI $V$ to 35psi and ANSI IV above 35psi; with the exception of $\mathrm{Vx}-7273$ and $\mathrm{Vx}-7283$ (ANSI III).
    d - For seat leakage ratings, refer to Seat Leakage Classes.

[^6]:    b - To determine a specific part number, see Pg. 50, Ordering VB-7000 Globe Valve Assemblies for the relevant part series.
    $\mathrm{c}-\mathrm{kvs}=\mathrm{m}^{3} / \mathrm{h}(\Delta \mathrm{P}=100 \mathrm{kPa}) \quad \mathrm{kvs}=\mathrm{Cv} / 1.156 \quad \mathrm{Cv}=\mathrm{kvs} \times 1.156$
    $c-k v s=m^{3} / h(\Delta P=100 \mathrm{kPa}) \quad \mathrm{kvs}=\mathrm{CV} / 1.156 \quad C V=\mathrm{kvs} \times 1.156$
    d - Mixing Valves A port seat leakage ANSI IV, B port seat leakage ANSI III, Diverting Valves seat leakage is ANSI III.
    e - For field assembly, factory actuator, linkage and valve assembly may be offered.

[^7]:    NOTE: Threaded bodies are not available in size $2 \frac{1}{2 \prime}$ " and larger.

[^8]:    a - See Pg. 111, VB-8000, VB-9000 Assembly Selection Procedure for the relevant part series to determine a specific part number.
    $\mathrm{b}-\mathrm{C}_{\mathrm{v}}=\frac{\mathrm{gpm}}{\Delta \mathrm{P}}$ (where $\Delta \mathrm{P}$ is measured in psi) $\quad \mathrm{kvs}=\mathrm{Cv} / 1.156 \quad \mathrm{~K}_{\mathrm{vs}}=\frac{\mathrm{m}^{3} / \mathrm{h}}{\Delta \mathrm{P}} \quad$ (where $\Delta \mathrm{P}$ is measured in bar; $1 \mathrm{bar}=100 \mathrm{kPa}$ ).
    c - Maximum allowable differential across the valve in any open position. Less than 20 psi recommended for quieter service. Consult close-off pressure ratings.
    d-Dual actuators are not available as factory assemblies.

[^9]:    a - Nominal (no load) spring ranges are based on maximum 1" (25.4 mm) or 2" (50.8 mm) stroke.

[^10]:    a - Non-spring return 3-way ball valve assemblies are shipped open $A$ to $A B$ and a control voltage increase will close $A$ to $A B$ and open $B$ to $A B$
    b- Spring return, 3-way mixing valves are normally closed, $A$ to $A B$ and a control voltage increase will close $A$ to $A B$ and open $B$ to $A B$
    c - To find the corresponding flow coefficients for these port codes, refer to " 3 -Way Ball Valve Assemblies - Sizes, Port Codes, and Cvs" on page 145.
    $d$ - To determine a specific part number, identify the actuator's control signal type ("A," "F," or "S"), actuator code, and P code. Refer to "Ball Valve Assemblies
    Using SmartX 8xx Actuators" on page 144.

[^11]:    a - To find the corresponding flow coefficients for these port codes, refer to "2-Way Ball Valve Assemblies with Sizes, Port Codes, and Cvs." on page 145.

[^12]:    a - To find the corresponding flow coefficients for these port codes, refer to "2-Way Ball Valve Assemblies with Sizes, Port Codes, and Cvs." on page 145.

[^13]:    a. The letter indicates the main valve and where the actuator is mounted

    * For spring return models this column also indicates position on loss of power.

    Three-way valves are configurable during the order process. When placing an order manually through customer care please note the Configuration Number above. When ordering online through iPortal, please select the proper configuration from the drop-downs on the Cart Page. Refer to flow diagram above.

[^14]:    a. See Table 2 to verify the correct actuator application for the valve selected.
    b. $\quad \mathrm{D}=$ Dual actuators
    c. E1x through E5x available as 24 Vac powered: change actuator code E to "F" and 120 to 24 , e.g. E10 to F10, then "S70-24-0061-H"

[^15]:    a. 120 Vac powered models shown, for 24 Vac models change the letter E to F. Example VAFS-6200-F10-L-11 would be 24 Vac powered
    b. E60/62 E70/72 E80/82 only available in 120 Vac.

[^16]:    ${ }^{\text {a }}$ For optional two SPDT auxiliary switch models the letter " S " must be added to the model prefix field. e.g. VxxS
    ${ }^{\mathrm{b}} \mathrm{D}=$ Dual mounting.
    ${ }^{\text {c }}$ Dual mounted application. One Mx41-7153 and one Mx41-7153-502 are supplied.

[^17]:    ${ }^{\text {a }}$ For optional two SPDT auxiliary switch models the letter "S" must be added to the model prefix field. e.g. VxxS
    ${ }^{\mathrm{b}} \mathrm{D}=$ Dual mounting.
    ${ }^{\text {c }}$ Dual mounted application. One NR-22xx-5x2 and one NR-22xx-5xx are supplied.

[^18]:    * For 24 Vac powered change two-position or proportional "E" code to "F," e.g. VAFS-6200-F10-L-11"

[^19]:    ( $Q_{\text {high }}$ setting)

[^20]:    * Total height of the assembly increases with the use of the Adapter model.

[^21]:    a May require close nipple conduit extensions for mounting $x-6680$.
